A patient-centric approach to restorative implant treatment

Author: Dentsply Sirona Implants Staff

It’s all the rage and everywhere you look these days, the focus is on customized solutions for each individual dental patient.

One key driver of this trend are the patients themselves; as information becomes more readily accessible, patients are becoming better informed and more educated on the level of function and esthetics that can be achieved with implant therapy. Another factor driving the trend toward individualized patient care is the ongoing development and advancements in technology that allow clinicians to deliver patient-specific solutions in a simpler, faster and more predictable way.

Atlantis patient-specific solutions (Dentsply Sirona Implants; Waltham, Mass.) are a perfect example of the innovation and technology available, according to the company. The digital workflow behind the design and manufacture of Atlantis implant-supported abutments and suprastructures, from impression taking to the delivery of the final restoration, allows for precise and esthetic outcomes based on the patient’s natural tooth shape.

With the added convenience of availability for all major implant systems and in the materials of choice, including titanium, gold-shaded titanium and zirconia, it’s no wonder that Atlantis has been the patient-specific solution of choice for clinicians around the world for more than two decades, the company asserts.

“Since 2000, I have utilized Atlantis abutments extensively, recognizing their potential for soft-tissue development,” said Leonard B. Kobren, DDS (White Plains, N.Y.). “They are compatible with nearly every significant implant system; providing prosthetic convenience, versatility, soft-tissue support, stability and ideal margin placement for achieving optimum esthetics and allowing for complete cement removal.

“The digital workflow that allows practitioner input and modification is unique and invaluable. Relying on the foundation of experience and commitment behind the Atlantis solution, I am confident in the treatment I provide in the rapidly changing environment of CAD/CAM dentistry.”

From a clinical practice perspective, adopting technology and providing advanced treatment of care is a necessary step to stay competitive. Incorporating a patient-specific solution, such as Atlantis, gives you that differentiating edge, while increasing overall efficiency of your implant treatment workflow and overall practice growth from higher patient satisfaction, according to Dentsply Sirona Implants.
