Technology and biology converge in the ‘Valley of the Sun’

Implant dentistry has come a long way from the early days. The advances are more than evolutionary. The American Academy of Implant Dentistry’s 62nd Annual Meeting from Oct. 23–26 will explore how biology and technology converge to improve the treatment options available to doctors to solve ever more difficult and complex issues for patients.

An international symposium, entitled “International Excellence in Implant Dentistry — The Spanish Connection,” complete with simultaneous translation, will lead off the main podium programs.

Live surgery presentations in the operatory, along with numerous intensive courses, many with hands-on components, will be offered as well.

The office team can look forward to two intensive days of programming on Thursday and Friday. Clinical and hands-on courses will be included.

One distinction that sets AAID’s meetings apart is the opportunity to interact directly with world-class experts and presenters. You will be able to text your questions during the main podium presentations, and the presenter will be given those questions to answer live at the end of the program.

Join your colleagues in Phoenix this October for some of the best in implant dentistry, where you will find practical education for the practicing implant dentist.

Check out the abstracts, learning objectives, speakers and complete schedule online at www.aaid.com or by scanning this QR code.
