Cover image provided by Dentsply Sirona: Discover a new solution for sloped ridge situations. Instead of augmenting sloped ridges to accommodate flat-top implants, it’s time to discover a simpler solution by using an implant that follows the bone. With OsseoSpeed Profile EV, you can leverage the unique implant design to follow the natural contours of the sloped anatomy and maximize existing bone, for optimized esthetics and marginal bone preservation.

‘OsseoSpeed Profile EV. Challenge conventional thinking.’
