Dr. Jack Hahn receives lifetime achievement award

By Glidewell Laboratories Staff

On June 12, the American Academy of Implant Dentistry awarded Dr. Jack Hahn for a lifetime of outstanding achievement. Hahn, pioneering implantologist who has placed and restored more than 45,000 implants over his 45-year career, accepted the award at the AAID’s summer meeting, coinciding with the launch of the new Hahn™ Tapered Implant System.

Hahn is perhaps best known for his development of the NobelReplace® dental implant, which went on to become one of the most widely used systems in the industry. More recently, Hahn partnered with fellow industry pioneer Jim Glidewell on a new venture that might help reduce the cost of implant treatment so more patients can afford care.

“I’ve placed more than 5,000 NobelReplace implants since developing the system nearly 20 years ago and have noticed areas for improvement,” Hahn said. “The Hahn Tapered Implant System has made these innovations a reality for the benefit of doctors and patients. Working with Glidewell Laboratories has allowed me to develop a cost-effective implant that improves the quality of treatment.”

Designed to engage a maximum amount of bone and achieve a high degree of primary stability in an extensive range of clinical situations, the Hahn Tapered Implant System, according to the company, has been engineered to help clinicians mitigate patient trauma, reduce chair time, promote long-term integration and facilitate immediate provisionalization and other prosthesis considerations.

NobelReplace is a registered trademark of Nobel Biocare group.
