Dentrix celebrates G5 launch

There was a party going on at the Dentrix booth on Friday afternoon. Trays of drinks and appetizers were passed around, balloons floated in the air and attendees gathered to learn more about the Dentrix G5, the newest version of the practice management solution, which made its debut here at the Hinman Dental Meeting.

Dentrix G5 includes many new features, including an enhanced technology architecture that builds on previous versions to deliver new levels of security, performance and stability. This includes a new SQL database and an improved software engine that increases reliability and overall performance.

With new encryption capabilities, Dentrix plays a key role in your efforts to stay compliant with HIPAA security standards.

“G5 is the best and longest-tested program Dentrix has ever released,” said Howard Bangerter, product manager for Dentrix. “It is faster, more stable and allows clinicians to do their work without worrying.”

The new electronic claims management capabilities save your office time by reducing manual data entry errors, eliminating rework and accelerating reimbursements.

The new electronic explanation of benefits (eEOB) statement automatically creates ledger entries the moment remittance notices are accepted into Dentrix — without any extra data entry.

With the integrated screen capture, you can quickly grab images from any source and use them for electronic charting, including validation of claims for certain carriers.

In addition, with the G5, Dentrix is now a platform for running applications that integrate directly with the Dentrix database.

With a newly designed architecture, combined with a robust developer program that certifies applications, Dentrix G5 has become an “open platform,” encouraging software developers to write applications for the Dentrix practice management system to share data with the new Dentrix database.

Bangerter said that, so far, 40 companies have signed up to create applications to run with the Dentrix system, with dozens more waiting in line.

Dr. Steve Drescher of Atlanta has been a Dentrix user since 1996.

“I’m very happy with it,” he said. “It works great, it helps with productivity and with daily tasks. I can’t wait to get to the next level with the G5!”

To see a demonstration of the Dentrix G5, stop by booth No. 805. Current Dentrix customers will receive an upgrade kit, which provides insight into the upgrade process.

Dr. Steve Drescher of Atlanta says Dentrix has been a valuable investment for his practice.
Mouthguards aim for gold

Keystone teams up with the U.S. Olympic Water Polo Team

Keystone Industries has teamed up with the U.S. Water Polo Team as its official supplier of mouthguards. The team will wear the new Pro-form Patriot Mouthguards during its pursuit of gold in the 2012 Summer Olympics.

Pro-form manufactures the only pre-made laminated mouthguard material in the industry. This material has long been considered the leader in custom-made mouthguards. By laminating two layers of soft EVA together, the laminate has excellent tensile strength. All of these features make the Pro-form mouthguard laminate the material of choice for custom-made mouthguards, according to Keystone Industries.

Pro-form Mouthguards are designed and form fitted to an athlete’s mouth, making communication in the pool, on the field or on the court easier for everyone.

When generic, clunky mouthguards are worn, an athlete’s oxygen intake is restricted. The oxygen supply can be reduced by as much as 25 percent, resulting in reduced performance.

DENTSPLY Caulk has patented its integrated brush unit-dose delivery system used for Calm-it™ Desensitizer. U.S. patent No. 7,959,370 was awarded to DENTSPLY for its all-in-one unit dose dispenser that includes an integrated application brush. The built-in brush makes application of the desensitizing material easier and faster. The steps are simple: snap open the unit dose vial, apply and gently air dry.

Calm-it Desensitizer is fast and provides pain relief in seconds. It lasts, eliminating or reducing dentinal hypersensitivity and eliminating discomfort from cervical erosions for six months. Calm-it Desensitizer is well-tolerated by other dental materials such as restoratives, adhesives, cements, temporary materials and amalgams. Calm-it Desensitizer comes in a 6-ml bottle.

For more information, contact your local DENTSPLY Caulk distributor, call (800) 532-2855, go to www.caulk.com or stop by the booth No. 1127.
