Most attendees at the Greater New York Dental Meeting will likely agree with Jerry Miller’s description of the exhibit hall: “Overwhelming.”

Miller, a dentist based in Ogdensburg, N.Y., has been attending the meeting annually for more than a decade. “Every year it gets better—and better organized,” he said. “You can go online, study the day’s schedule and identify exactly what to do and where to go. In 10 or 15 years, you won’t even need a pen; everything will be done by computers—or, probably, all through your phone.”

Miller said he hits the exhibit hall with a list of what he needs, shops around the first couple days and then buys. At the top of his list this year: bulbs for his curing lights.
**Silent Nite® Slide-Link** $99*

- Our No. 1 prescribed snoring appliance is also a low-cost solution for sleep apnea
- Connectors are interchangeable by the patient
- Free six-month replacement warranty

**aveoTSD®** $139‡

- A brilliantly simple, low-cost treatment for snoring
- Gently suctionst to the tongue, preventing it from falling back and blocking the airway
- Requires no impressions or adjustments

**EMA®** $189*

- Appliance for snoring or OSA
- Elastic straps are interchangeable by the patient
- Elastic strap strength is matched to the patient’s musculature

**TAP® 3 Elite** $359*

- Appliance for snoring or OSA
- Greater range of adjustment than previous TAP devices
- More lateral movement for improved patient comfort and compliance

Orders will not be fulfilled without a valid dental license. *Price does not include $14 round-trip overnight shipping.
‡ aveoTSD volume pricing/unit: (1–4) $139; (5–9) $129; (10–19) $119; (20+) $115.

EMA is a registered trademark of Frantz Design Inc. TAP is a registered trademark of Airway Management Inc.
DTSC: An ‘isle’ of C.E. on the exhibit hall floor

By Robin Goodman, today Staff

If you don’t want to zigzag around for pertinent C.E. credits, check out the schedule of lectures in various disciplines at the Dental Tribune Study Club C.E. Symposium (aisle 5000, room 3).

Monday’s speakers included Drs. Fay Goldstep, Gary Henkel, Ron Kaminer, Mike Rethman, Mark Duncan and Robert Horowitz. Topics ranged from bone grafting and implant therapy to caries control, minimally invasive dentistry and maximizing practice success.

For example, Kaminer shared how new materials can make traditional restorative techniques easier and more efficient while Goldstep helped attendees understand and incorporate new remineralization therapies and bioactive restorative materials into everyday dental practice.

Today’s line-up is no less varied with lectures on topics such as predictable endodontics, direct posterior composites, managing your practice’s online presence, clinical techniques, predictable implants and using lasers in endodontics.

Join Dr. Ron Jackson at 11:15 a.m. today to review current matricing techniques that ensure quality contacts, and learn how to save time without compromising by using bulk-fill composite technology.

If you are in need of Internet assistance, Dr. David Evans can teach you the basic elements of search engine optimization (SEO) and how to evaluate these elements for your practice website. Evans will also detail the basic components of an effective practice website, as well as explain the three-step process for creating a positive online reputation. In addition, Evans will explain how to evaluate your return on investment for Internet marketing.

By Robin Goodman, today Staff

The Live Dentistry Arena here at the Greater New York Dental Meeting is usually standing room only, and Monday was no exception. The morning presentation by Dr. Franklin Shull, “Everyday Esthetic Dentistry,” focused on a long-term provisional for a missing anterior tooth.

Shull, “Everyday Esthetic Dentistry,” focused on a long-term provisional for a missing anterior tooth.

In the afternoon session led by Dr. Ara Nazarian, “OCO Biomedical Presents Simple Implant Placement in a Complex Economy,” Nazarian placed an implant and immediately provisionalized it. Today’s options at the Live Dentistry Arena feature Dr. Ross W. Nash in the morning session talking about “Composers.” He will explain how direct composite resins are an alternative to indirect ceramics, how the composite laminate can provide final anatomy and how placing direct composite veneers saves time.

In the afternoon, Dr. Raymond A. Yukna will demonstrate “The Laser Assisted New Attachment Procedure (LANAP).” Attendees will learn the scientific basis for the LANAP procedure, how to verify appropriate tissue interactions, what a laser wound looks like and how to use the PerioLase MVP-7 for LANAP.

Both of today’s sessions are recommended for dentists, hygienists, assistants and students, and each will last 2.5 hours. We recommend you arrive early if you want a seat closer to the stage, although we have great visibility of the work going on via the large video screens on either side of the stage.

Esthetics and implants take the ‘live’ stage

By Robin Goodman, today Staff

Dr. Ron Kaminer stopped for a photo on Monday in front of his Dental Tribune Study Club C.E. Symposium poster. He enlightened attendees on Tips, Tricks and Techniques to Maximize Success.

Dr. Mike Rethman enlightened Dental Tribune Study Club C.E. Symposium attendees (aisle 5000, room 3) about “Fluorides and Non Fluoride Interventions for Caries Control: An Overview.”

New posterior composite technology improves placement efficiency

By Ronald D. Jackson, DDS, FADC, FAGD, FAACD

In 1990, 94 percent of dentists in the United States chose amalgam as their primary intracoronal posterior restorative material. By 2010, composite resin restorations had exceeded amalgam by a ratio of 2:1.

In fact, it is estimated that one-third of U.S. dentists no longer use amalgam and those who do report a steady decline. This is not an indictment of amalgam, a material that has served dentistry well for more than 100 years. There are many reasons for this relatively rapid and significant change in restorative dentistry. In this author’s opinion, the leading reasons are:

- individual patient desires for non-metal, natural looking restorations.
- the less invasive nature of composite restorations.
- the significant improvement in composite material physical properties, leading to increased durability and longevity, which, according to recent clinical studies, can rival amalgam.

Nevertheless, many dentists still complain that placing posterior composites is exacting, tedious, time consuming and not always predictable.

Speeding up the process

Current composite resins now yield high physical properties of hardness, flexural strength and fracture toughness, as well as low shrinkage and low wear. However, these highly filled, highly viscous materials can make it more difficult to achieve intimate adaptation to cavity walls and, because of low depth of cure, require multiple, separately adapted and cured layers.

Manufacturers have begun to address this concern by introducing new composite resins and technologies specifically for posterior use, which allow dentists to place restorations faster and easier. Indeed, one such product/technology, SonicFill, by Kerr, eliminates the need for a low viscosity liner altogether and, with a depth of cure of 5 mm, allows rapid restoration placement in the majority of posterior cavities in one, single bulk fill increment.

This is accomplished because SonicFill is a highly filled (84 percent by weight, shaded composite resin (B1, A1, A2, A3) that contains special rheological modifiers sensitive to the specific high frequency vibration provided by the sonic handpiece. The handpiece’s most quick disconnect air line couplers, but universal adaptors are available if needed.

Upon activation, the viscosity of the composite drops 87 percent and is rapidly extruded from the unit dosed tip. The composite is literally vibrated into the cavity and adapts intimately to all cavity walls in the same manner that mixed stone is vibrated into an impression. Most cavities are totally filled in less than five seconds.

Upon deactivation of the handpiece, recovery is not immediate, so viscosity returns at a slower rate. This intermediate viscosity makes the material non-sticky and non-slump, so it can be easily and quickly sculpted to accurate anatomy.

This author finds that from the time the adhesive is cured, posterior composites (even relatively large Class IIIs) can be placed, cured, finished and polished in less than three minutes (Figs. 1a–1d).

Placing posterior composite restorations is a significant bread-and-butter service in most general practices. With SonicFill, less time is needed to place these restorations, thereby improving practice profitability and, at the same time, less tedious effort is expended, improving practice satisfaction for the dentist.

For the second year in a row, SonicFill (Kerr) has received the “Best of Class” Technology Award by the Pride Institute at the Greater New York Dental Meeting.

Disclosure: Dr. Ron Jackson discloses that he acted as a consultant in the development of SonicFill and retains a financial interest in the product.

How to ‘Perfect Your Online Presence’

Dr. David Evans talks tips and tricks of the Internet

By Kristine Colker, Managing Editor

TODAY from 12:45 to 1:45 p.m. in aisle 5000, room 3. Dr. David Evans will present “Perfect Your Online Presence” as part of the DTSC Symposium.

In his session, he will discuss the various factors that influence Internet presence and how dental practices can attain “high Internet presence.”

Evans talked to today about what to expect from his symposium.

Dr. Evans, you are presenting a DTSC Symposium session called “Perfect Your Online Presence.” How do you give us a brief overview of your session?

Word-of-mouth marketing was the most important thing for dentists five or 10 years ago. Now, it’s different. People go online to check you out. Patients associate wildly with Google rankings. They also have the perception where they associate quality with where you appear in the rankings. It might not be connected in reality, but it’s connected in people’s minds.

Has internet marketing replaced word-of-mouth (WOM) referral?

No, in a successful practice, your WOM will always be a very important component of marketing for new patients. Now, however, many prospective patients will research on the Internet to support WOM referral.

When a prospective patient is considering dental work and receives a WOM about your practice, the next step for the prospective patient is the Internet, where he or she will peruse your website to research your background, look at your before-and-after photos and review your testimonial. Consumers also research other places where you appear online.

A strong Internet presence, with a captivating website, will enhance the WOM referral and lock in the new patient. On the other side, a poor showing on the Internet can break a great reputation and the WOM referral.

Also there are some cases, such as when a prospective patient is new to the area (and with the mobile population, this number is growing), in which the patient does not have anyone to ask about a WOM referral. In these cases, a strong Internet presence is the only way to get that new patient. In balance, strategies to boost the WOM referrals will continue to be important, but expect Internet marketing to take a larger and larger role over the coming years.

How can my practice’s website get ranked higher on Google?

Keep in mind that Google ranks websites, not dentists. You can be the best cosmetic dentist in the world, but if your website is not search-engine friendly, then Google will not rank you on the first page in your market.

Google uses about 200 different variables to rank websites. Convincing Google to give you good rankings requires that your site is equipped with these 200 variables. These variables fall into two broad categories, on site and off site.

In simplistic terms, the on-site variables relate to your content and the attributes on various pages of the website. The off-site variables relate to the links you have coming to your site and how many consumers share your site with others. The process for obtaining high rankings on Google and other search engines is called search engine optimization, or SEO.

How much time should I spend working on my website and SEO? I have a busy practice and can’t find the time. What will it cost to get help?

You can save money on SEO and your website if you write all of your own content, build your website and perform optimization. These activities could take 10 to 15 hours a week to do properly. An effective SEO company will charge a monthly fee, and then your time is spent in the clinic working with patients, where you generate revenue for your practice.

How do I choose the best website and SEO company for my practice?

When choosing a website and SEO company, it is best to focus on companies with experience in dentistry, particularly high-end dentistry practices. Review their website portfolio to determine if their designs fit the image of your practice.

Most importantly from an SEO perspective, review the rankings of the prospective company’s other clients to see how well the SEO has worked for them. The most efficient method is for one company to handle both the website and SEO, but this is not absolutely necessary. If you already have a website and/or designer you like, then hiring a company only for your SEO can work well. Also, many website designers do not necessarily understand and/or properly perform SEO, so it would not be unusual to hire a separate company for SEO.

Also make sure you understand fully what you are buying when you purchase a website. Many dentists do not realize they do not own their websites, but instead they are essentially leasing the website design, content and hosting of the site. There are two easy questions to ask a potential website company to determine if the website you are buying will actually be owned by you.

• Will I own the copyright to the website design and content?
• If I lease your services, can I take the website to another company?

If you receive a “no” to either of these questions, be cautious. Many factors determine how well a website ranks on Google. But one big factor is its age. If you leave a vendor where you are leasing a site, then you lose the site and you have to start over from a longevity standpoint, a new website can take up to one year to rank on Google.

I’ve hired an SEO company. How do I know if they are doing a good job?

The bottom line of SEO is rankings, traffic and conversion. The top SEO companies will boost rankings for your website and modify it to increase conversion. If you are not receiving more leads from your website since hiring your SEO company, it is probably not doing a good job.

What are the most important components of a practice website?

Keep in mind that when prospective patients visit your website, the question on their minds is “What is it in it for me?” Your website has two to three seconds to capture the attention of prospective patients and convince them to stay there to learn how they can benefit from your practice.

The key elements patients like to see are testimonials and before-and-after photos. These help visitors better understand how treatment can help them. They also want to see that you have extension training and education. And finally, educational content about the procedures you offer will help visitors to understand the services they need/want, which makes them more likely to convert to a high-value patient once they visit your office for a consultation.

Should I list my practice in a directory?

Marketing research shows consumers are two-thirds more likely to convert if they see you in multiple places online. When visitors find your website online, and then also see you in a dentist directory, the likelihood of getting that patient to visit your practice increases dramatically.

The best directories provide a place to post your before-and-after photos, news items, testimonials and your training and experience. Make sure the directory offers an email contact form for you specifically, a tracking phone number and a link to your website. Regular reports for traffic, email leads and phone calls should also be provided.

If your directory listing can provide two to five prospects per new patient and one high-end patient, then it is a worthwhile investment. Revenue for one patient pays for the listing, and then that patient serves as a WOM referral source for other potential new patients.

Should I have a social media strategy for my practice?

Social media is becoming more important, but it may not be for everyone, as it requires dedicated staff time on a regular basis. Facebook should be the primary focus of any social media thrust. Twitter, Pinterest, StumbleUpon, etc., are probably not a good allocation of resources at this time.

To be effective, the Facebook strategy should engage with current patients with the focus being to get them to share with their friends and thus provide WOM referrals. Most practices use social media incorrectly. Constantly posting articles about treatments offered at the practice or discounts on teeth whitening is a big turn off for patients. They will stop visiting your Facebook page and discontinue your alerts.

The proper strategy is to engage with patients using articles that would be interesting in, such as information about back to school, a new staff member or local news. Do you and your staff participate in the “Tomorrow’s SMILES” program or did you do any volunteer work at the school?

Also, consumers love contests and voicing their opinions. Let your Facebook users know you value their comments. A company that wins and one high-end patient has the best smile or have a content to submit the quote of the month.
From the Front Office to the Treatment Room and every touch-point in between, Henry Schein has the solutions you need to connect your practice technologies. The size of your practice, your budget, and your patients’ needs are all important to the solutions required to increase workflow and enhance efficiency.

With your success in mind, let us help you determine which products and technologies will advance patient care and your practice.

Contact your Henry Schein Sales Consultant for details.
Profitable clinical techniques you’ll want for your practice

By George Freedman, DDS

There are numerous dental innovations that make clinical practice better, faster and easier. These are often relatively inexpensive and exceedingly easy to implement. They increase efficiency, reduce stress and measurably improve the bottom line.

Here is a sampling of products I believe are in this category:

The revolutionary DentalVibe GenII eliminates the apprehensions and fear associated with dental injections. Increased anti-pain power and twice the amplitude at the vibrating tip provide greater sensory nerve stimulation, enhancing the pain-blocking effect.

DentalVibe’s VibraPulse technology stimulates the sensory nerves at the injection side—effectively closing the neural path gate, thereby blocking the pain of injections. Cordless and light (less than three ounces), it also has strategically placed finger grips that make it readily portable.

Dental Vibe II delivers soothing, pulsed, percussive micro-oscillations to the injection site.

Try it; your patients will love it. And so will you!

• The dental team is tasked with performing regular cancer screenings for patients, and DentLight’s DOE (DentLight Oral Exam) System makes this potentially life-saving examination pleasant and fast. It helps dentists and hygienists to identify abnormal tissues that may otherwise escape detection earlier than is possible with unaide visual examination.

The DOE looks and feels like a portable curing light, with similar intraoral access, only much more versatile. DentLight’s patented light-generating technology, Fusion Curing Light, provides an outstanding clinical output of more than 1500mW/cm²; with a high-power density over an extended wavelength range that provides worry-free bonding. Fusion takes light curing to the next level.

• High-speed handpieces should not be wobbly, loud and prone to break down. This is where electrical handpieces improve chairside life immeasurably.

Bien Air’s Swiss-engineered Optima MX2 INT, a very versatile unit that offers pre-programmed modes for all the main restorative operations as well as endodontics, is a uniquely controlled handpiece experience with maximum utility in the practice.

The innovation is that the ultra-quiet Optima MX2 INT is a true all-in-one system; only two contra-angle handpieces are required to perform virtually all dental procedures, increasing efficiency and decreasing clinical time. If you are still utilizing air-driven handpieces, you might want to consider upgrading your operatory to bring it into today’s electronic age.

• Given the tight confines of inter-dental spaces and the dentist’s limited visibility and access for preparation, interproximal nicking of adjacent tooth/restoration surfaces occurs all too often. Directa’s FenderWedge protects adjacent surfaces from inadvertent iatrogenic damage.

Easy to position and comfortable for the patient, the FenderWedge is an excellent tool for truly conservative dentistry. The FenderMate is an innovative one-piece wedge-matrix (no-ring) combination that inserts like a wedge and functions like a matrix.

Directa’s CoForm anatomical matrix system is a comprehensive multisized kit of preformed transparent celluloid matrices specifically designed to restore realistic three-dimensional shape and form to composite restorations that replace incisal edges and fractured teeth.

About the speaker

George Freedman, DDS, is past president of the American Academy of Cosmetic Dentistry and the chairman of the Dental Innovations Forum (Singapore). Freedman is the author or co-author of 11 textbooks, more than 400 dental articles and numerous CDs, video and audiotapes and is a team member of REALITY. Freedman is a co-founder of the Canadian Academy for Esthetic Dentistry and a diplomat of the American Board of Aesthetic Dentistry.

Inseparable: Zirconia and PermaCem 2.0

PermaCem 2.0 has the Strongest Adhesion to Zirconia than any Leading Self-Adhesive Permanent Cement*

PermaCem 2.0 is proven to provide one of the strongest bonds to Zirconium restorations compared to the other leading self-adhesive cements. Incorporating a recently developed adhesive monomer formula, the dual curing properties deliver an exceptional bond across all substrates. Formulated for easy clean-up, the optimized viscosity and no-drip formulation provide for the fastest and easiest removal of excess of all other self-adhesive cements, resulting in less stress and chair time. Plus as a single-step cement, it provides you with the added benefit of not requiring an etching step. Whether it’s PFM, PTM or Zirconium restorations, give your patients the best seat in the house while delivering the utmost in strength, stability and esthetics with PermaCem 2.0.

Dental Milestones Guaranteed

SPECIAL INTRODUCTORY OFFER: Buy One, Get One Free!**

For more information, or to order PermaCem 2.0, contact your authorized dental supplier, call 800-662-6383 or visit dmg-america.com.

*Based on 2011 SDMA Data. Data on File.
**Free goods shipped directly from DMG America. To receive free goods, please fax your paid dealer invoice to DMG America at 201-894-0213. Order must be placed through Authorized Dealer and redeemed within 30 days of purchase. Limit (2) per dental office. Offer valid through 12/31/12. May be discontinued at any time.
Smaller, smarter handpiece tech
Now available in the U.S.
Japanese engineering is celebrated for making our favorite technologies smaller and perform better. Now, that smaller, smarter technology is available for your practice – with the new S-Max pico handpiece from NSK. It features the world’s smallest head – giving you easier access for hard-to-reach molars and pediatric cases. And, like other NSK electric and air-turbine handpieces, the S-Max pico offers innovative features such as super-slender styling, cellular glass optics, our patented Clean Head technology for enhanced infection control, and a cartridge you can simply replace yourself.

Ask how you can get an S-Max pico in your hands today.

Introducing S-Max pico

The world’s smallest head.

*Global handpiece market as of 11/2011

Come see the S-Max pico your next “must have” at:

2012 Greater New York Dental Meeting
New York, NY

Feel like you are stuck in a rut? Need a change? Having a hard time getting things going with all the worry about the economy? This is your golden opportunity to regain control of your practice and recapture your passion for dentistry!

Think about attending a Las Vegas Institute for Advanced Dental Studies LVI Regional Event. You have the opportunity to discover the path that will lead you to both personal and professional satisfaction.

As a dentist, you have likely heard about LVI and considered taking a course but simply cannot justify spending the money or taking the trouble to bring a patient all the way to Las Vegas to find out what LVI is all about. This is the best time to attend one of our regional events, especially if you are feeling bored with the same thing every day or just can’t seem to get out of the rut you are in!

LVI one- and two-day regional events are designed to share with the participants a more professionally satisfying and profitable way to practice dentistry. You will receive valuable information about LVI’s esthetic and occlusal philosophies that are revolutionizing our profession.

Among the several things you will learn during the course of the meeting:
• How to create a “Golden Age of Dentistry” in your own office.
• Learn how to take a T.E.N.S. Bite for optimal position to restore your cases.
• Turn your patients into guests and make it easier for them to accept comprehensive treatment.
• Hear from one of our experienced LVI regional directors about their personal journey and how you can create one, too.

By attending a regional event, you will have taken the first step toward boundless opportunities for you and your patients. Regional events are held throughout the year in different locations throughout the United States and Canada, so visit www.LVIGlobal.com to find your opportunity to attend. This experience will give you tools to make a better income and afford better equipment and, while that is great, the most important thing it will do is allow you to deliver better quality of care and a higher quality of living for your patients.

It is time for you to learn first-hand what LVI is all about. Once you have experienced it, enjoy the benefits of your education and training!
FAST MONEY.

Super Fast Set Tray/Wash Materials.

Sometimes you can’t wait. All new Aquasil Ultra Super Fast Set tray and wash impression materials have a set time of 2-30" and come in 380mL DECA™ and 50mL delivery systems. Save time and get results. Super Fast.

Clinical benefits of the Inclusive Tooth Replacement Solution

By Darrin W. Wiederhold, DMD, MS, and Bradley C. Bockhorst, DMD

With the new Inclusive® Tooth Replacement Solution from Glidewell Laboratories, the clinician receives all the components necessary to place, provisionalize and restore an implant. Custom-designed temporary components allow for immediate provisionalization specific to each patient, and a matching custom impression coping communicates the final gingival architecture to the laboratory. The Inclusive Tooth Replacement Solution supports a streamlined workflow that ensures predictability and long-term success.

Once you’ve selected a diameter and length of implant, forward the diagnostic materials (impressions, models, bite registration, shade, implant size) to Glidewell for fabrication of the custom components. The laboratory will pour and articulate the models and assemble the components, delivered to you in an all-inclusive box, including a prosthetic guide, custom temporary abutment, BioTemp® provisional crown (Glidewell), custom healing abutment, custom impression coping, surgical drills and Inclusive Tapered Implant (Glidewell).

On the day of surgery, place the box contents alongside your usual surgical armamentarium. Confirm the fit of the prosthetic guide prior to beginning the procedure (Fig. 1). After placing the implant and verifying its position (Fig. 2), decide based on the level of primary stability whether to place the custom healing abutment (Fig. 3) or custom temporary abutment and accompanying BioTemp crown. Either option will begin sculpting the soft-tissue architecture around the implant to develop the future emergence profile.

Upon successful osseointegration, the restorative phase begins. Contours of the custom impression coping must match those of the custom abutment, so it’s simple to remove, seat the impression coping and take an accurate full-arch final impression. After final delivery, remove the temporary abutment. Try in the final Inclusive Custom Abutment (Glidewell) and BruxZir® (Glidewell) (Fig. 4) or IPS e.max® (Ivoclar Vivadent; Amherst, N.Y.) crown. Check the contours, contacts and occlusion, and adjust as needed.

In response to the dental implant market embracing the importance of soft-tissue contouring, Glidewell Laboratories’ Implant department has now expanded the Inclusive Tooth Replacement Solution to accommodate all implant systems compatible with the Inclusive Custom Implant Abutment product line. This creates the opportunity for more clinicians to offer their patients the advantages of the tissue-contouring system contained within the Inclusive Tooth Replacement Solution. Whatever implant system you use, you and your patients can now benefit from the tremendous effects of training tissue from the time of implant placement.

Next November, plan to visit Toronto

By Toronto Academy of Dentistry Staff

The Toronto Academy of Dentistry’s 76th Annual Winter Clinic held at the Metro Toronto Convention Center on Nov. 2 was a resounding success, according to the TAD.

A total attendance of 2,572 represented an increase in dentists as well as booth spaces from the previous year. More than 20 programs representing a wide spectrum of dental interests were presented, including 12 hours of CORE-approved courses.

Liz Pearson, one of TAD’s featured clinicians, unveiled her new book and was also available for book signings. The proceeds of the signings went to About Face.

The Canadian Armed Forces were active participants with a program on nation building and a display on the exhibit floor of a mobile dental suite. Many lecture rooms were at capacity and overflowing. The academy launched its new initiative with the Mikey Network, a program geared to placing automatic external defibrillators (AEDs) in public places.

The team concept of Winter Clinic continues to attract dentists, hygienists, assistants and office administrators from not only the Toronto area but from all over the province and even from the United States, the academy said.

Congratulations to the winners of the photography contest, and congratulations to the winner of the free trip for two donated by Sandals, Dr. Juris Michelsons of Cambridge, Ontario. Mark your calendar for Nov. 8, 2013, for TAD’s 76th Winter Clinic.
CAESY expands to the clouds

CAESY Cloud is Patterson Dental's latest addition to the CAESY Patient Education Systems family of products. CAESY Cloud is online and guarantees dental professionals immediate access to more than 280 multimedia patient education presentations, including the most up-to-date materials featuring 3-D animation, full-motion video, narration and colorful images. CAESY Cloud features include:

- Easy startup with no installation required and only a low monthly subscription fee so you can start using CAESY Cloud in your practice immediately.
- Compatible with both PC and Mac services, smartphones and the iPad, iPhone and iPod — no additional software purchases are necessary.
- No network connections are necessary between participating computers, allowing presentations to be accessed from multiple locations within the practice with no additional charge.
- Presentations are updated frequently and with the ease of a standard Internet connection, users will immediately be able to use the latest videos in all patient appointments.

With the addition of CAESY Cloud, dental professionals now have more tools and more options to present their patient education materials. There are three chairside formats to choose from — CAESY Cloud, CAESY DVD or CAESY Enterprise — as well as front-office programming with the Smile Channel.

According to Patterson, countless dental professionals have seen how CAESY optimizes staff time, eliminates the fatigue of repeating explanations and increases case acceptance rates in the practice.

Dr. Marty Jablow, a beta-tester and new user of CAESY Cloud, said: “I have found the convenience of a cloud-based system delivers many benefits in comparison to the alternatives. Using a cloud-based system eliminates the need for time-consuming and frustrating installations. It’s as simple as opening up a web browser and logging in to a website.

“With some other patient education systems, there is a need to update software or install the latest version. However, with CAESY Cloud, practices have instant access to all updates and new presentations automatically. There is no hassle updating software. IT headaches and, more importantly, IT costs are eliminated by using the cloud.

“I find that using CAESY Cloud along with other educational tools, such as CAESY Smile Channel from Patterson Dental in the reception area, is an effective way to educate patients and create new business,” Jablow said. “I would definitely recommend it for small and large practices alike that want to increase case acceptance rates and put their practice at the forefront of technology.”

CAESY Education Systems has been one of dentistry’s premier developers of leading-edge patient education technology and content since 1993. Patterson Dental Supply acquired CAESY in May 2004. The award-winning multimedia information on preventive, restorative and aesthetic treatment options helps dental practices worldwide educate their patients and grow their practices.

The CAESY content is distributed via video and computer networks, DVD players and now through the cloud throughout the clinical and reception areas of a dental practice. The entire family of products includes CAESY Cloud, CAESY DVD, Smile Channel DVD and CAESY Enterprise, which includes CAESY, Smile Channel and ShowCase.
A faster way to seal

For decades, dentists and hygienists have had no alternative but to use harsh phosphoric acid etching to improve the bondability of dental sealants to enamel. In doing so, they have lost countless hours to applying acids, waiting, rinsing and drying.

With all these added steps, perhaps the greater issue is how many failures have resulted from trying to shortcut procedures? Indeed, working with phosphoric acid is always a double-edged sword. If not left on long enough, one risks failure; leave it on too long and healthy enamel is eroded. Thanks to advances in adhesive technology and a new pit and fissure sealant from Shofu, dental professionals don’t have to choose between a secure bond and lost time and preservation of tooth structure anymore.

BeautiSealant from Shofu is a faster, easier and gentler pit and fissure sealant system that completely eliminates the need for phosphoric acid etch and rinse steps, while still maintaining equivalent bond strengths to acid etched competitors. Considering these steps represent a 40 percent to 60 percent reduction in working time, that extra productivity can go a long way toward keeping a practice profitable.

Fast application
The instructions for BeautiSealant are simple:
• Apply the primer to a clean tooth and leave for five seconds.
• Air-dry five seconds.
• Apply the sealant.
• Light-cure 10 seconds LED (20 seconds halogen).

Secure bond, gentle on enamel
BeautiSealant Primer contains dual-adhesive monomers (carboxylic and phosphonic acid) that thoroughly penetrate and prepare pits and fissures for bonding to the sealant, forming a chemical bond to calcium in the enamel. Unlike traditional sealants, which require phosphoric acid etching, severely demineralizing and dehydrating healthy teeth, Shofu’s self-etching primer is significantly less acidic, helping to preserve healthy tooth structure.

Despite this lack of acid etch and rinse steps and a HEMA-free composi-
tion, shear bond strengths remain at levels that meet or exceed market-leading sealants at 19.5MPa.

Smooth application
BeautiSealant Sealant is an easy-to-apply sealant, optimized for smooth, bubble-free consistency. Achieve precise delivery without the common issue of overfilling with a specially designed no-ooze syringe and a tiny 0.27-gauge needle tip. This improved control over the flowability of the sealant allows placement of just the right amount of material, reducing the common occurrence of overfilling.

Sustained remineralization from glass ionomer fillers
Shofu’s proprietary Surface Pre-Reacted Glass (SPR-G) filler particles are not only pre-charged with fluoride during manufacturing, they also recharge when fluoride concentrations in the mouth are high. Simply put, household dental hygiene products, such as fluoridated toothpaste, allow BeautiSealant to provide sustained remineralization benefits to adjacent tooth structure over the life of the sealant.

In addition to fluoride, SPR-G filler also releases five other ions: sodium, strontium, aluminum, silicate and borate, all with known bioactive properties. When exposed to concentrations of lactic acid, these ions contribute to an acid neutralization effect that demonstrates the healing benefits of glass ionomers.

Here at the GNYDM
The first 10 dentists or hygienists to mention this special at Shofu’s booth, No. 431, will receive a free BeautiSealant Kit ($81.12 retail value). In addition, the first 100 attendees who mention this special will receive a full-size sample of lip gloss. For more information, contact Shofu at (800) 827-4638, visit www.shofu.com or stop by booth No. 3207.

From top, healthy enamel, BeautiSealant primed enamel and phosphoric acid etched enamel.

BeautiSealant Primer contains dual adhesive monomers (carboxylic and phosphoric acid) that thoroughly penetrate and prepare pits and fissures for bonding to the sealant, forming a chemical bond to calcium in the enamel. (Photo/Provided by Dr. Satoshi Fukumoto, Tohoku University, Japan)

Capture the QR code to view an acid neutralization video.

Place BeautiSealant in four steps: Apply the primer to a clean tooth and leave for five seconds, air-dry five seconds, apply the sealant and then light-cure 10 seconds LED.
THE CAESY EFFECT:
Educated patients. Accepted cases.

Educated patients make the right decisions when it comes to their treatment. There's no simpler way to educate your patients than with CAESY.

CAESY patient education is right for your practice!

see it. hear it. believe it.
The four Fenders: preparation protection and matrices of the future

Now available in a complete start-up kit with a book full of clinical advice and examples shown in text, pictures and video clips

FenderWedge
The safety belt of the dental world. A must for all proximal preparations.
A proximal preparation protection consisting of a stainless steel plate mounted on a plastic wedge. The protection is inserted, buccally or lingually from front, with a snappy push, which fixes it during the entire preparation. The adjacent tooth and gingival papilla are now well protected, and the preparation can be performed quickly, safely and without risk of bleeding. The wedge separates the adjacent teeth, which supports the matrix filling and facilitates good contact.

FenderPrep
Allows subgingival preparation for crown or surface avoiding subsequent bleeding. The surface of adjacent teeth is safeguarded.
A proximal preparation plate for protection of adjacent teeth and gingiva in case of major preps. A perforation of the plate at base makes pre-bending of the steel plate possible so that it is positioned away from the surface to be prepared. The boat-like tip and softly rounded underside press gently on the gingiva so that even subgingivally the preparation can be performed without injury or bleeding, which facilitates subsequent impression measurement.

FenderMate
The world’s quickest matrix. Self-shaping contact. Close cervical connection.
A sectional matrix with a pre-curved contact point on a curved wedge. It is pushed in from the side, buccally or lingually, with a curved contact point under the prep limit until the optimum contact point is reached. The contact point will shape automatically to the cavity. The wedge wing will press the matrix toward the preparation limit and connect tightly without any risk of excess material. The matrix has two bends in two different wedge sizes.

FenderPrime
The market’s first combined prep protection and matrix for class II fillings on primary teeth
Approximal restoration of children’s primary teeth should be made in a simple, quick and safe way. The treatment can then be reduced substantially if the protection can also be used as matrix if the contact and absence of cervical excess remains.
FenderPrime is therefore a combined protection and matrix with a perfect size for primary teeth. It is available in a harder, short model in neon yellow and a longer flexible neon green. The yellow version is preferable when the contact is tight and hard. The green version is preferable when the preparation is expected to be larger, because the flexibility of the matrix produces a better shape.

FenderMate Fix
A new, unique solution for class II composite preparations for wider cavities.
The FenderMate matrix is attached to its wedge by two fix points which can be easily loosened with a carver instrument. The soft matrix is then bent so that the box is closed and fixed to the adjacent tooth structure with a light-curing FenderMate Fix; a liquid composite with a low filler content.

I LIKE MY LASERS LIKE I LIKE MY CARS

PHAST
Photo Hydro Acoustic Systems Technology

LIGHTWALKER™
Erbium & Nd:YAG
The Endo, Perio, Soft & Hard Tissue Laser

Photo Active Systems Technology, or PHAST™, is the scientific foundation for the Lightwalker and the basis for PIPS™ as well as other advanced clinical laser procedures.

PIPS™ (Photon Induced Photoacoustic Streaming) Laser Endo is an advanced and breakthrough PHAST™ method for cleaning and debriding the root canal system using Er:YAG laser energy.

"I have been using PHAST™ laser endo for over a year. Herb Schilder stated that endodontic cases had the potential of 100% success minus X. The X factor being the complexity of the root canal system and the operator's ability to manage the cleansing and shaping of that system. I believe that it enhances my ability to reduce this X factor to as close to 0 as is possible today. The LightWalker™™ has also proven to be very valuable to my implant cases. Having both Erbium & the Nd:YAG in one system allowing you to get more for your investment."

Bryan M. Beebe D.D.S.
Endodontist, Sarasota, FL

Henry Schein and Quintessence form a strategic partnership

Two market leaders join forces to broaden oral health education

Henry Schein and Quintessence Publishing this Monday morning used the Greater New York Dental Meeting exhibit hall to announce a strategic partnership designed to expand the availability of oral health education to dental professionals.

Henry Schein is one of the world’s largest providers of health-care products and services to office-based dental, medical and animal health practitioners. Quintessence Publishing is a leading independent publisher of scientific and clinical information about oral health.

At the heart of the partnership is a joint commitment to provide the best and latest clinical information on treating oral disease so practitioners can provide the most advanced care possible for their patients.

Under the agreement, Henry Schein will use its industry-leading distribution network to market in North America the book titles, professional journals and multimedia products published by Quintessence, whose work has earned many prestigious international awards during the company’s 62-year history. The companies also announced a partnership to present a co-branded symposium to explore the connection of oral health and systemic health. This symposium will be in February 2014 and will be led by Michael Glick, DMD, dean of the School of Dental Medicine at the University at Buffalo and editor of The Journal of the American Dental Association.

“We are delighted to partner with Quintessence, which is known throughout the profession for publishing the highest-quality educational materials devoted to oral health,” said Stanley M. Bergman, chairman and CEO of Henry Schein. “Henry Schein is committed to helping improve the business of our health-care customers so they can improve the lives of their patients.”

“This strategic partnership with Henry Schein gives us the opportunity to expand that community, one dentist at a time,” said William Hartman, executive vice president of Quintessence. “Each reader provides additional depth and a new perspective to our community. Our goal is to work with acknowledged experts to publish the best and most useful books within every specialty, and we know Henry Schein is dedicated to promoting this same professional excellence.”

The one-year publishing agreement will renew automatically for successive one-year terms. The Henry Schein sales network will market the Quintessence portfolio, which includes 50 professional journals and more than 1,000 book titles. Quintessence will manage the delivery of materials directly to customers.

Specials

“..."There’s just so much here," he said. "And every year it just overwhelms you."

This year is no exception, with an exhibit hall packed with new products and special promotions. Plenty of examples were revealed during a quick stroll Monday morning. Among them:

• Rose Micro Solutions in booth No. 622 has a special loupé and light combination package from “Mama Rose” for $799.
• At the TruDenta booth, No. 3302, the first 100 visitors every day get a free copy of the textbook “Understanding, Assessing and Treating Tomandibular Sensorimotor Dysfunction,” released here at the GNYDM. The book’s co-authors are available at the booth at various times.
• Store-A-Tooth (Provia Labs) has a special dispenser for your hands-free dispenser free (normally $75). The Mydent folks say the foam hand cleaner can’t beat on cost and the hand sanitizer has the highest kill rate.
• Pick up a New York Times crossword puzzle umbrella or a T-shirt with the subscription specials at the New York Times booth, No. 4618.
• William Yamaguchi, better known as “Dr. Fuji,” has special prices on his relaxation chairs and Cyber-Relax units in booth No. 1324. Look for him dancing/vibrating on his Cyber-Relax.
• New Jersey artist Bill Lopa was painting one of his impressionistic oils in the Amazing Animations booth, No. 1900. New York artist Charles Fazzino is in the booth today from 1:30 to 5:30 p.m. signing dedications.
• In the Mydent International booth, No. 2215, buying two cases of Dreumex Ominicare products gets you a hands-free dispenser free (normally $75). The Mydent folks say the

The TOP choice for your BOTTOM line.

ScanX® Digital Imaging is easy on:
Your Patients. Your Staff. Your Wallet.

**PROFITABLE.** No more costly chemicals. No hard sensor replacement insurance. And low-cost plates can be re-used **thousands** of times.

**CLEARER.**
A stunning 22 line pairs/mm delivers crystal clear images that film and hard sensors can’t touch.

**FASTER.**
Image acquisition takes a fraction as long as film/

**FLEXIBLE.**
Unlike hard sensors, ScanX works for 100% of your cases, including pediatric and geriatric patients.

**EFFICIENT.**
No chemical processor maintenance. And unlike hard sensors, no training is required since ScanX uses the same protocol as film.

**COMFORTABLE.**
ScanX’s soft, wireless, flexible plates are far more comfortable for your patient than film or hard sensors.

ScanX can save you $60,000+ over 5 years

Ask for a Product Demo of any one of our NEW ScanX models in **Booth# 2609** at the GNYDM.
