Advancing your skills to advance your career

By Aspen Dental Staff

In a recent study among 200 dentists, the vast majority expressed interest in ongoing training to advance their skills. In fact, 81 percent of experienced dentists and 92 percent of recent dental school graduates said they would like to continue improving their skills.

Furthermore, 41 percent of experienced dentists and 62 percent of recent graduates would like an assigned mentor to help in their development.

Whether it's maintaining accreditation to meet licensure requirements or learning new techniques to improve the quality of care, even the most seasoned dentists recognize the value of continuing education.

The question remains how to find proper training that is not only useful but convenient given your busy patient schedule and the other responsibilities required to manage and grow your practice. With private practice, dentists often have to squeeze in training at night through online courses or other resources. What's more, recent graduates often have to learn the ropes of a new practice with little supervision or mentorship.

The vast network of dentists and specialists at Aspen Dental, however, offers the structure and resources to give you plentiful learning and mentorship opportunities. For example, the Doctor Development Program at Aspen is offered to all new dentists. It was designed by a group of Aspen Dental practice owners who identified key components for transitioning newly hired dentists to Aspen Dental and then fostering their development through each step in their career.

Upon joining Aspen, all dentists are assigned an Aspen mentor doctor who creates a personalized training program based on experience level and continues to serve as an advisor on an as-needed basis. Prior to even starting your position with Aspen, you spend a full four weeks with your mentor in his or her office, which offers you the most supportive onboarding experience possible.

Your first year might include clinical experience and supervision to refine your capacity for complex procedures, treatment planning and case presentations, plus consultations with your mentor and online education to earn free ADA CERP-accredited C.E. credits.

Throughout your entire career, Aspen Dental provides advanced clinical education to stay abreast of the latest devices, techniques and protocols. You also get access to Aspen's Practice Ownership Program, which may include workshops or a special ownership retreat for developing your managerial and leadership skills.

Best of all, because Aspen handles the administrative, marketing and business aspects of running a practice, you have the time to focus on your development.
Identic™

is Smooth

Quality alginate that you can rely on everyday.

• Easy to mix
• Fine detail
• Excellent stone surface
• Unsurpassed smoothness

SPECIAL!
Buy 1 lb of Identic, get a bottle of Clean and Lube Spray FREE!

‘Highest quality and a unique design’

An interview with Joan Muñoz, R&D Director of Microdent Implant System

By Javier de Pison, today Staff

The first thing that is surprising during a visit to the Barcelona, Spain, factory is the sparkling cleanliness of the facilities, where Microdent Implant System—well known for having developed the first bone expanders and such implants as the “Genius”—makes all its implants and abutments.

Director of Production and Research and Development Joan Muñoz takes us through the different areas, where titanium rods are selected and then manufactured, the decontamination and sterilization center, and the packaging area.

What are the requirements to manufacture implants?

The manufacturing phases of dental implants are:

1. Design phase. The implant is defined and designed. The design shows all the features (shape, dimensions, functions) an implant should have to fulfill its function and adequately meet the needs of patients. This is what makes Microdent stand apart from other implant manufacturers.

2. Manufacturing: Based on the design, we transform the raw material into a piece that will end up being a dental implant. This machining is done in numbered lathes.

3. Checks: A dimensional and visual inspection of all manufactured parts is conducted on each implant to verify all parameters considered important or critical.

4. Surface treatment: This ensures that the implant has a contact surface suitable for the best osseointegration. The procedure is twofold: first, particles are used to increase the total contact surface, and secondly, a wash and decontaminating process is applied. This includes an acid wash that makes the surface homogeneous and removes all cytotoxic agents.

5. Packaging: This has two parts: The product is prepared and mounted with other parts of the implant (holder and end cap) and packed in a container, which is closed and sealed for sterilization by irradiation. Later, the set is properly sterilized, packaged, and labeled.

What manufacturing controls are used?

We use the most advanced digital technology systems, enabling accurate proving and high quality in all phases of production:

1. In the design phase, all documents are supervised, and we manufacture small amounts of parts and prototypes to verify that the design meets established goals.

2. In the manufacturing stage, two types of controls are performed, one prior to starting production to ensure a smooth start of the cycle and then periodic checks to ensure its correct development.

3. The verification stage was discussed before.

4. In the surface phase, we do a visual verification and check the connection of assembly and disassembly of guards. This must be done to avoid damage to this important part of the implant, which will hold the prosthetic system.

5. At packaging, mounting the implant allows us to re-check it visually as well as ensure the connection’s accuracy.

Finally, after the implant is sterilized, we verify it has been done properly and the whole set is in good condition.

What international standards meet your implants?

All our implants, attachments and tools comply with all rules on medical devices in the United States and the European Union. We also meet other recommended standards such as ISO 13485.

We also have official health approvals to market our products in several Middle East countries and are in the final stages of doing so in Bolivia, Colombia and Mexico.

What are the advantages of your implants?

There are two main advantages that differentiate our implants.

• A 25-year manufacturing history. Our experience proves the quality of our products, since it provides evidence of the main features of our implants: osseointegration and durability.

• A unique and distinctive design. Our implants are manufactured with extreme precision to ensure the best possible functionality, but what makes Microdent unique is our special thread design, which provides a great self-tapping capacity and a large contact surface with bone for osseointegration.

How does R&D work in the company?

We have our own research, development and product improvement team. We also have a scientific committee of clinical and company advisors. The committee meets several times a year to discuss product enhancement. In addition, Microdent has partnerships with research centers and universities where quality verification and research is made using our products.

What are Microdent’s main products?

Those that clearly differentiate us from the rest, such as:

• The “Genius”: It is an internal connection implant with a hexagonal ribbed cone that provides the perfect sealing of the implant-prosthesis junction in a monoblock. The “Genius” emerging cone design provides a surface area for biological growth, which reduces gingival retraction.

• Microdent External Connection Implants: This is an implant system more robust and resilient than the universal external connection, and offers the same type of connection for prosthetic restorations.

• Atraumatic expanders: Our bone expanders provide oral implantology with an important technological innovation, a global reference product that is a must for any implant professional. This practical and simple instrument avoids surgical trauma and, since it works progressively, allows effective control of the expansion process.

• Cortical Six: Like the expanders, this is also an important technological innovation in the implant field because it allows the use of a minimally invasive sinus lift atraumatic technique.

What about quality?

Quality has always been our top priority. Our company not only offers medical device certification but also high manufacturing standards like ISO 13485, which means that all our manufacturing processes comply with the quality principles in that norm.

What are your plans?

We are a family-owned business that manufactures high-quality products. We have launched an international marketing campaign to expand operations in the United States, Latin America and the Middle East.

We will be at major dental shows, such as AAID, GNYDM, Chicago Midwinter and the ADA. We have launched an advertising campaign in print and online and will be providing free online implant courses through Dental Tribune Study Club that will enable people to see the advantages of Microdent Implant System.
WE MAKE DENTAL ISOLATION EASY!™

Learn it. Live it. Love it.

WHAT IS IT? IT is Isolite Systems' state-of-the-art and clinically proven Isolation Technique for consistent, predictable results every time. IT controls moisture and oral humidity by keeping the working field as dry as a rubber dam, but without any of the hassle. IT improves visibility and minimizes contamination. IT retracts the tongue and cheek and obturates the throat. IT protects your patients from accidental injury and foreign-body aspiration. IT gives you total control of the oral environment so you can do your best dentistry.

NOW EXPANDED TO SIX PATIENT FRIENDLY SIZES
Enhance your patient’s natural smile with the artistry of PROFIN IPR

By Dentatus Staff

Dentatus introduces its newest addition to the highly acclaimed reciprocating PROFIN DIRECTIONAL SYSTEM — PROFIN IPR™, tips for interproximal reduction.

PROFIN is an essential addition to any discipline in dentistry and, now more than ever, in orthodontics.

For a dentist, patient safety is top priority; that’s why we developed the PROFIN IPR. When appropriately performed, PROFIN IPR with its 1.2 mm axial stroke allows for concise corrective modification processes safely, efficiently and quickly. With its high-performance quality, PROFIN IPR diminishes risks of excessive stripping, thereby ensuring a more conservative removal of prescribed amounts. PROFIN IPR also eliminates the risk of damage to soft tissue.

With PROFIN IPR, dentists can correct disproportionate tooth sizes, eliminate crowding, protect enamel and increase the durability of orthodontic treatment results. Natural contours are easily recreated because the PROFIN contra/angle provides smooth and conservative reduction in a limited tip motion.

Each of the new PROFIN IPR tips is gauged to prescribed amounts of reduction. Tips are available in five sizes, ranging from .25 to .5 mm, reducing procedure time significantly. The reciprocating action prevents heat buildup, and because of this, no water cool down is necessary.

The PROFIN system has long provided innovative solutions for restorative and esthetic dentistry in the finishing, polishing and contouring of dental surfaces (natural or restored). Each PROFIN handpiece features a “self-steering” mode that allows the tip to move freely for easy polishing and cleaning, as well as a “fixed” mode that locks the tip in place for greater control and a performance-enhancing experience. This is particularly useful for defining prepared teeth margins and extensions.

With PROFIN, reshaping contacting areas of teeth adjacent to planned restorations and the fine-tuning of occlusal and incisal inclines in all excursions has never been more accurate. An assortment of color-coded diamond coated tips is available from very course to very fine. The flat thin tips come in a variety of shapes, sizes and grits, allowing for optimal control and access.

The PROFIN PDX handpiece features excellent ergonomics, a smooth glare-free surface and a slim head ideal for access in difficult-to-reach spaces. With the purchase of any PROFIN PDX system here at the GNYDM, receive a free PROFIN handpiece for delicate fine finishing.

Fixed hybrid dentures have been used to successfully restore fully edentulous patients for decades. Their durability, however, leaves room for improvement.

The BruxZir® Full-Arch Implant Prosthesis (Glidewell Laboratories; Newport Beach, Calif.) provides a restoration that is more durable in the long term, while sacrificing nothing when it comes to esthetics.

Case report
The patient is a 58-year-old male with no contraindications for implant treatment. The patient had a total of 11 BioHorizons® Internal Hex implants (BioHorizons; Birmingham, Ala.) placed, including six in the maxilla and five in the mandible (Figs. 1, 2). The implants integrated for more than six months, and the patient presented for restoration of his edentulous arches.

First, preliminary impressions of the implants were made. After removing the healing abutments, closed-tray impression copings were seated. The impressions were made in stock plastic trays, and the impression copings were placed back into the impressions before the case was sent off to the laboratory.

The laboratory poured casts from the initial impressions and fabricated bite blocks and occlusal rims for the centric jaw relationship (CJR) records. Each bite block contained two screw-retained temporary cylinders that allowed the wax rims to be screwed down, producing a very accurate CJR. The contoured rims were returned to the laboratory with the initial casts.

Upon receiving the wax rims and jaw relation records, the laboratory and dentist decided the patient required four multi-unit abutments in the anterior maxilla to ensure the screw access openings were within the confines of the planned prosthesis.

At the next appointment, the patient’s healing abutments were removed, and the multi-unit abutments were transferred to the patient’s mouth and torqued into place. Later, wax setups were tried in and evaluated for proper esthetics, phonetics, contours, occlusion and tooth arrangement.

The implant verification jig (IVJ), which precisely captures the depth and angulation of the implants in the final impression, was seated and tightened into place. After bonding the individual sections of the IVJ together, a final impression was made.

The lab produced a fixed provisional appliance using precise CAD/CAM technology. The provisional implant prosthesis afforded the patient a trial period to evaluate the proposed restoration for esthetics and function (Fig. 3).

The final restoration was fabricated using the CAD design that was confirmed during the provisional trial period. The final prostheses were delivered without complication, exhibiting excellent fit, occlusion and esthetics (Fig. 4). The patient was exceptionally pleased with the function offered by this fixed restoration, which he should be able to enjoy for a great number of years given the extraordinary durability of BruxZir Solid Zirconia.
Shofu Dental Corp. announces the latest addition to its extensive product line: the EyeSpecial C-II Digital Dental Camera.

The EyeSpecial C-II digital dental camera is designed exclusively for dentistry and features 12 megapixels and eight shooting modes that are easier, faster and more reproducible to ensure the best quality of images are achieved.

The EyeSpecial C-II offers a high-performance, 49 mm close-up lens, intuitive one-touch operations, an ultra-lightweight sleek body design and a large LCD touchscreen, which allows the user to view and scroll through images effortlessly, even with a gloved hand.

Designed to produce superb image quality, EyeSpecial C-II has exceptional depth of field range, fast autofocus and anti-shake capabilities, as well as infrared, UV and anti-reflection filters to help achieve those high-quality images.

Although lightweight, the camera is very durable and will withstand the occasional mishandling. It is scratch- and scuff-resistant, as well as water and chemical proof, which is essential for infection control in the office.

Created for dental and orthodontic photography, case presentations and at the bench in a laboratory, EyeSpecial C-II is user-friendly and can be held comfortably with one hand, freeing the other to use a cheek retractor or mirror.

Included with the EyeSpecial C-II is a 4 GB SD XC card, but the camera is also compatible with an Eye-Fi Pro X2 card, allowing images to be automatically transferred and uploaded onto a computer, tablet or smartphone.

With a retail price of $2,795, EyeSpecial C-II comes with a 4 GB SD XC card, four AA batteries, a Kenko 49 mm macro lens for close-up shots, a computer connection cord and hand strap and a flash calibration card.

Included with the EyeSpecial C-II is a 4 GB SD XC card, but the camera is also compatible with an Eye-Fi Pro X2 card, allowing images to be automatically transferred and uploaded onto a computer, tablet or smartphone.

With a retail price of $2,795, EyeSpecial C-II comes with a 4 GB SD XC card, four AA batteries, a Kenko 49 mm macro lens for close-up shots, a computer connection cord and hand strap and a flash calibration card.

In addition, SureFile photo management software is available for free download. This software will allow the user to automatically sort and file images by patient name or ID number, saving time and improving HIPAA standards.

Shofu’s EyeSpecial C-II is designed exclusively for dentistry and adds consistent efficiency to all your dental photography needs.

BOOTH #1423
Fusion 4: Good for so much more than curing

By DentLight Staff

**FUSION 4**, manufactured by DentLight, upgrades its award-winning curing light to a new level of ergonomics, functionality and performance. The Plano, Texas-based supplier is showcasing the new release here in New York at booth No. 4402.

As Dr. Richard Liu, president of DentLight, explained, in addition to its ultrafast and reliable curing functions, the FUSION 4 can also be used for caries, canals and early cancer detection for added profit streams.

As a curing light, the FUSION 4 is easy to use and one of highest performing lights around, thanks to its patented optics and modular design that deliver a focused, low-dispersion beam of 2700 mW/cm² high power for bulk or five-second cure.

The new user interface features an impressive, intuitive and multi-color backlit LCD, displaying digital timers, battery icon, power level and thermal status. The streamlined metal keypad has two raised buttons, including a large on/off button for easy activation.

“This just blows everything else on the market away,” Liu said. “There isn’t anything else like it.”

Liu said the light adds to profitability for the dentist, offers increased marketability potential for new patients — and it can also help to improve procedures more cost effective, predictable and quicker, according to the company.

“Superior strength, cutting efficiency and unbeatable clinical results make EDS tips the dentist’s No. 1 choice in endodontic access refinement, post removal and passive ultrasonic irrigation (PUI),” the company said in a press release.

An EDS Tip Introductory Kit is available in both E and M thread. The kit comes with a tip taxi, wrench and one of each of the six EDS tips.

For more information on EDS tips, including special pricing, visit www.edsdental.com, call (800) 223-5394 or stop by the booth, No. 2003, here at the Greater New York Dental Meeting.

EDS ULTRASONIC TIPS

- Essential Dental Systems Inc. (EDS) has added a product to its line of dental devices: EDS Ultrasonic Tips.

According to EDS, the tips advance two key factors in endodontic success: access cavity refinement and canal orifice location. Developed by leading endodontists, EDS Ultrasonic Tips make ultrasonic procedures more cost effective, predictable and quicker, according to the company.

Here at the GNYDM

Check out the FUSION 4, Nano 2S and other DentLight products at the booth, No. 4402.

EDS Ultrasonic Tips. (Photo/Provided by Essential Dental Systems)
Showcasing CariVu: A new approach to caries detection

By DEXIS Staff

The new CariVu™, a compact, portable caries detection device, promises to create quite a buzz here at the Greater New York Dental Meeting.

If you have yet to stop by the DEXIS booth, No. 4025, to see this new product, then you owe it to yourself to take a look today.

DEXIS CariVu uses unique, patented transillumination technology to provide the ability to easily detect a range of carious lesions (occlusal, interproximal, recurrent) and cracks. This new system employs near-infrared light, which, in images, turns the natural tooth transparent and the caries dark, similar to radiographs, thus making it a view that is familiar to clinicians.

Not only are CariVu images easy to read and understand, they are captured and stored with the patient’s other images in the DEXIS software. Because all intraoral X-rays, camera and CariVu images for the select tooth appear side-by-side, the clinician can quickly compare them to make a diagnosis and decide on a course of treatment.

These images can also be shared with patients so they may better understand the need for preventive or restorative care.

The technology behind CariVu offers an advantage in diagnosis of caries over systems that rely on fluorescence reactions, which are typically denoted by colors or numeric values.

In laboratory testing, this new transillumination device showed the view of the lesions on the images correlated well with their actual physical conditions.

With CariVu, the dentist therefore gains a more accurate view of the actual carious lesion’s shape and size, not just an indication of the presence of decay.

Be sure to get your hands on CariVu here at the GNYDM to see the CariVu for yourself, stop by the DEXIS booth, No. 4025.

A.B. Dental Devices unveils customized implants solution

By A.B. Dental Devices Staff

A.B. Dental Devices, a global leader in innovative dental solutions, will debut its latest technological advancement, customized implants, here at the Greater New York Dental Meeting in booth No. 5411.

Customized implants is a unique solution that uses 3-D laser printed technology combined with A.B. Dental’s patented computerized planning system as part of the restoration process. These unique implants are suitable for patients who have been afflicted with cancer, suffered accidents or experience other medically severe conditions.

A.B. Dental works with specialists to plan and design customized implants via ABGuided™, a unique service of treatment planning and surgical guides for dental implants. This solution is only available via A.B. Dental and is designed to improve the quality of life for patients with critical conditions.

Based in Israel, A.B. Dental Devices is known for its innovative and advanced capabilities. With a distribution network in more than 50 countries, A.B. Dental provides cutting-edge solutions to dental professionals the world over.

The DocPort i.o. intraoral camera features a focus-free design for ease of use and crystal clear imaging. Image acquisition is hassle-free via the easy-touch capture button located on the camera wand, or with optional USB footswitch. Direct computer connection using a standard inexpensive USB cable eliminates costly cable repairs and the camera is supplied with a remote automatic on/off handpiece holder. Easy integration with any dental software platform in both PC and Macintosh environments makes DocPort i.o. the natural choice for quality dental imaging.

James Rosenwald, DDS, FAGD
“I recently bought two DocPort cameras (to replace my older units) and found them so easy to use and so valuable to my practice that I have purchased three more units. I highly recommend this camera.”

Gerald Ross DDS—Tottenham, ON
“I’ve had cameras costing more than double, but my staff prefers the DocPort over any other because the pictures show incredible detail and it’s so easy to use. We’ve tried a lot of them, but this camera is amazing.”

The Planmeca Compact i Touch, Sovereign Classic and Sovereign make up a distinctive product line that is built with the doctor in mind. Feature-rich and designed to accommodate your preferred working positions, these units are made to minimize physical strain and maximize the life of your practice.

**Planmeca Sovereign**

The Planmeca Sovereign is a combination of sophisticated engineering, innovative technology and award-winning design. It is the only dental unit on the market with both a motorized chair swivel and a motorized base for ease-of-use for any treatment need — such as CAD/CAM, implantology, laser treatment, prosthodontics or even anesthesia, all in the same room.

In addition, the length of the motorized backrest can be adjusted to optimally position patients of all sizes. Available only on the Planmeca Sovereign, this innovative feature guarantees the best possible comfort for the patient and optimal working ergonomics for the dental team.

**Planmeca Sovereign Classic**

The Planmeca Sovereign Classic was designed around the key concepts of comfort and usability. A slim, compact cuspidor makes it the perfect choice for any treatment room, while the user-centered design offers ease of use for both doctor and assistant. UltraLeather™ upholstery and ergonomic design also ensure patient comfort during procedures.

The unit is fully customizable, providing options for personalized settings from its user-friendly touchscreen. A six-position instrument console allows easy access to preferred instruments, while the Flexy™ holder for suction tubes and additional instruments supports the treatment needs of any practice.

**Planmeca Compact i**

Planmeca Compact™ i supports an ergonomic and smooth workflow, with simple and intuitive details that make your everyday work easy, comfortable and efficient — without compromise.

For versatility, its compact size fits almost any office design, plus it’s packed with features and functionalities to maximize your productivity.

With more than 40,000 satisfied users around the world, it is expertly designed to accommodate a wide variety of needs in dentistry.

SharperPractice: The Bat Cave of dentistry

By SharperPractice Staff

SharperPractice specializes in distributing innovative products from around the globe that are “Best in Class.” For more than 20 years, the company has been in the business of providing the most advanced intraoral camera solutions in the industry – as well as innovations that increase efficiency for the dental office.

Some dentists who have visited the SharperPractice booth in a dental meeting exhibit hall refer to it as the “Bat Cave” because they are amazed at the quality and innovation in the products presented.

The company’s flagship product, the DocPort i.o. intraoral camera, features a fog-free, focus-free design for ease of use and crystal-clear imaging. Image acquisition is hassle-free via the easy-touch capture button located on the camera wand or with the optional USB footswitch.

Direct connection to USB ports using a standard, inexpensive USB cable eliminates potentially costly cable repairs, and the camera is supplied with a remote automatic on/off handpiece holder.

Designed to integrate directly with any dental software platform in both PC and Macintosh environments, DocPort i.o. is an easy choice for quality dental imaging.

New from Carl Zeiss — and from others

• As many as 75 percent of adult patients experience some degree of anxiety when visiting the dentist. Tackling patient anxiety is not always a simple solution for a dental practice. One of the most effective and natural ways of putting them at ease is through distraction, which can take the mind’s attention away from the sights and sounds of the dental office to a more calm and peaceful place.

Thanks to the Cinemizer OLED, your patients can experience high-quality 2-D or 3-D videos during almost any procedure in a comfortable, convenient and immersive environment. This will help them relax and forget where they are, decreasing anxiety and stress and improving their overall experience in your office.

• SockIt! is the first and only wound dressing specifically designed for oral use. It’s as simple as performing the procedure as you normally would, then applying SockIt! chairside and sending the remainder home with the patient. You can use it after any procedure, and it does not replace anything else in your office. Stop by the SharperPractice booth to sign up for a free product evaluation.

• FlashMax P3, one of the most powerful curing lights in the world, has a wide-spectrum output of more than 5,800 mw/cm² and cures 3 mm layers of most materials in only two seconds. Manufactured in Denmark, the FlashMax P3 features a unique ergonomic design with simple identical bilateral controls in a cordless form factor. Replaceable smart-charge battery technology allows the light to charge throughout the day on its 360-degree base and activates 200 cures on a single charge. It contains nearly three times the power of plasma arc lights at a fraction of the cost.

• The EverClear mirror is a must for every dental office. This is the mirror you never have to wipe. Gone are the days of constantly wiping handpiece spray and debris from a dental mirror. Gone are worries about the assistant’s air spray keeping the mirror clean. No longer will dentists twist their backs and necks to get a direct view of the tooth, when a spray-covered mirror stops serving its purpose.

Only the best-in-class products and services become SharperPractice offerings, according to the company. For more information, you can visit www.sharperpractice.com or stop by the booth, No. 927, here in New York.

Cinemizer OLED virtual reality video glasses from Carl Zeiss. (Photos/Provided by SharperPractice)

Here at the GNYDM

To see some of SharperPractice’s offerings, stop by the booth, No. 927.

The I-DENT EverClear mirror

• The I-DENT EverClear mirror, right, never needs to be wiped clear of handpiece spray and other debris (as opposed to a regular mirror, left), ensuring constant unobstructed views of your work zone.
ZOOM IN. ZOOM OUT

It's time to zoom in and take a closer look at EyeZoom™, the first and only lens to offer multiple magnification powers. Co-engineered by Orascoptic® and Konica Minolta®, this revolutionary optical design boasts a 3-step variable magnification technology and edge-to-edge high-definition resolution.

HYGIENE INSPIRED
HYGIENIST APPROVED

Designed by an elite team of practicing hygienists and recognized ergonomics and infection control experts, this lens works to improve ergonomics, productivity and career longevity. Encapsulating an optimal field width and depth recommended for dental hygiene professionals, the optics deliver a crisp image with edge-to-edge clarity.

Meet EyeZoom™ & RDH Elite™ at BOOTH 4022
Leading dental equipment manufacturer NSK Dental LLC has announced that its recently launched iCare handpiece maintenance system is enjoying a very strong reception from dental practices.

The iCare system makes it possible for dental practices to perform handpiece maintenance with the simple touch of a few buttons. This state-of-the-art system allows the practice to give each type of handpiece its own cleaning program, which includes specifying the volume of lubrication oil to be injected to ensure consistent and cost-effective operation.

In addition, an advanced chuck-cleaning function makes it easy to effectively remove dirt and abrasive powder from the inside of the chuck to ensure smooth operation and prevent chuck-related problems. This maintains the optimal condition of handpieces and greatly extends their operating life.

A boon to office productivity, the iCare system was designed by NSK to handle up to four handpieces at once. The system offers a choice of two or three rotation ports for better lubricant coverage of gears for e-type electric attachments and slow-speed handpieces. This feature, which ensures consistent cleaning and lubrication, is not offered by most competitive systems.

The iCare system also uses liquid oil, which economically cleans up to 2,800 handpieces (700 cycles) per liter. Moreover, it has LED lights to alert the user when a door is open or when the oil supply or air pressure is low.

The iCare system has a stylish, compact body that can be installed anywhere a compressed air line is available. (The unit has a footprint of less than 9.5 by 11 inches and a height of less than 14 inches. It weights less than 15 pounds.) The system carries a two-year warranty.

“As the leader in handpiece quality and innovation, we have a deep appreciation of how crucial handpieces are to the efficient operation of today’s dental practice,” said Rob Gochoel, director of sales and marketing for NSK Dental. “We wanted to give dental practices a maintenance system that allows them to protect their investment in their handpieces as effectively, conveniently and affordably as possible, and the feedback we are receiving from our customers indicates that the iCare system does exactly that.”
Experience the NEW BIOLASE, the NEW epicX and the Artistry of CIRQUE

Performances by Cirque du Soleil artists at booth #600 11:00, 12:00, 1:00, 2:00 daily.

The precision and innovation you expect from Cirque performers is the same precision and innovation you receive from BIOLASE, the global leader in dental lasers.

Family-owned Flow Dental expands digital imaging line
40-year-old company keeps pace with practices going digital

By Flow Dental Staff

Conversion from film to digital takes many forms. It’s not just the dental office that is moving from film to digital imaging. Flow Dental, long a leading manufacturer of dental film and film accessories, has also transformed its product portfolio to include unique products essential to every dental practice that’s gone digital.

“We determined that our relevancy in a digital world would hinge on our ability to provide dentists with accessories that improve sensor or PSP usage and augment procedure workflow, (no pun intended),” said Bill Winters, president of Flow.

“Dentists have really responded to our digital products. They recognize the added value we put into each product. They don’t buy our products based on price; they buy based on the benefits to their practice and their patients.”

Take the PSP market. Today, one out of every eight phosphor plate users relies on Flow’s Safe’n’Sure line of PSP envelopes. Safe’n’Sure’s three product styles each offer elegant time-saving solutions to enhance throughput and productivity while helping to extend the life and usage of the phosphor plates.

A great example of this is Flow’s Safe’n’Sure OPT style. These PSP covers are designed for plates that include magnets — about 25 percent of the market.

Unlike any other product, Flow pre-loads the cardboard insert halfway into the PSP envelope. Not only does this eliminate a time-consuming step, but it also assures the plate can never be loaded incorrectly (as the magnet on the plate has to line up with the cut-out on the cardboard insert).

To enhance removal of the plate, the OPT has a unique butterfly seam. This allows the user to easily remove the plate, without having to touch it. This prolongs and preserves the longevity of the plates.

Flow’s DELUXE Safe’n’Sure line was recently featured in a review by Clinical Research Associates. More than 75 percent of dentists who reviewed Flow’s Deluxe Safe’n’Sure said they would recommend it to their peers.

In the sensor area, Flow also distinguishes itself. Take its new Snuggies adjustable sensor sleeve. Snuggies allows the user to cinch-tight the sleeve around the sensor, regardless of sensor size or thickness. This means the operator no longer has to twist the sleeve around the sensor cable in order to keep it in place. It’s little things like that which add to office productivity and reduce expensive sensor repairs or replacements.

Other sensor accessories include Sensible’s adjustable sensor positioner, which allows the user to move from an anterior to a posterior or even to a bitewing position, all with the same bite block. The Sensible bite block can be adjusted to the mid-line of any sensor, whether horizontally or vertically placed. It’s the only sensor positioner that can do all this, according to the company.

Today, Flow is far from finished re-inventing itself. Its newest product is the Exposure line of articulating strips. “As a leader in diagnostic products, we felt extending our line into it right here in the United States,” Exposure articulating strips eliminate the need for forceps. They come with their own handles.

“They’re easy to use and long enough to reach the back molars,” Winters said. “Dentists will appreciate the added convenience of not having to search for forceps or get the ink all over their gloves.”

Flow recently celebrated 40 years in business. Its sister company, Wolf X-Ray, is celebrating more than 80 years of service to the medical imaging market.

“As a family-owned business,” Winters said, “much like the majority of dental offices we service, we are proud to be a valued provider of unique and elegant products. And the best is yet to come!”
Year End Premium Bundles

Section 179 benefits may be decreasing, but Henry Schein is counteracting this by bringing you more savings than ever, up to $55,000* on Bundled Digital Solutions!

Face masks, desensitizing agents, gels and more make their debut

By Mydent International Staff

Launched in 1985, DEFEND by Mydent International is a global brand serving more than 50 countries in the manufacturing of high-quality infection-control products, disposables, preventatives and impression-material systems.

With 30 years of service to the dental industry, Mydent International says it manufactures more than 40 percent of the consumables that are used in the dental operatory.

From award-winning sterilization products, impression materials, prophylactic paste, wipes and lab coats to disposables and more, Mydent International manufactures more than 300 items used by dental professionals.

New DEFEND Marketplace

Mydent International has developed a new marketplace for dental professionals to conveniently place DEFEND orders through their preferred dealer.

For a limited time, Mydent International is giving away $50 Restaurant.com eGift cards to dental professionals who order $150 or more on the website (suggested retail) of DEFEND products through their selected dealer. Learn more at www.defend.com/marketplace.

New products

Now and throughout 2015, Mydent will be introducing a variety of new dental products, including those listed here:

• Sensitive dual-fit ear-loop face mask: Mydent’s newest face mask is gentle on sensitive skin and free from inks, dyes and fiberglass. This fluid-resistant mask is latex-free with an inner layer made of soft material.

• DEFEND Desensitizer: DEFEND Desensitizer is a desensitizing agent that can be placed under dental cements or used with temporary, provisional or final restorative materials to reduce postoperative sensitivity.

It can also be used for desensitization of amalgam restorations, either conventional or bonded. DEFEND Desensitizer contains HEMA to aid bonding primers to penetrate etched dentin. The HEMA base in DEFEND Desensitizer helps seal tubules, giving immediate relief from pain due to hypersensitivity.

• Fitted digital sensor sleeves: With twice the thickness of conventional sleeves, these fitted sleeves are significantly less likely to tear. They feature soft, rounded edges and are latex-free. These sleeves offer a precise, snug fit to sensor size, resulting in no additional plastic being placed in the patient’s mouth.

• Latest-technology dual-fit face masks: Mydent’s newly designed line of DEFEND dual-fit face masks create a tight, custom fit for enhanced facial protection. With the latest in contour technology, these face masks feature a form-fitting, pliable nose and adjustable chin-band to ensure ultimate comfort.

• SRG evacuation system cleaner with improved multi-enzyme blend: Used daily, this evacuation system cleaner will keep lines running free and clear at maximum suction. The non-foaming formula has a neutral pH for safe use with amalgam separators and maintains the ability to dissolve organic fluids and debris. The peppermint scent helps to eliminate odors.

• Benzocaine anesthetic topical gel 20 percent: Fast acting with no systematic absorption, this anesthetic gel provides temporary relief of pain during dental procedures. With no
In addition to its elegant and stylish design, its ease-of-use, its high image resolution and its reliability, the I-Max Touch 3D offers the ideal field of view (FOV) for use in dental imaging. With SimPlant® software pre-loaded, the I-Max Touch 3D is a MUST HAVE for your implant planning.

4 ways to stand out on social media

Want to stand out from the crowd on social media? With millions of practices posting an unending stream of information, it could be difficult to separate yourself from the pack.

Here are four rules of thumb to maximize your practice’s social efforts.

1. Keep it timely
Relate your practice to current events or holidays. For instance, at the beginning of the new year, it would be smart to drop some advice on dental care to support New Year’s resolutions.

Your followers may be grateful for the extra help to keep them from slipping back into bad habits.

2. Keep it personal
Connect your practice to your community by promoting local events or other businesses. Keep your ear to the ground for the latest in your neighborhood to turn your page into a source of news and knowledge.

Share images or videos so your followers get to know your practice behind the scenes.

3. Keep it simple
Remember that your patients are seeing tons of posts on social media, so make sure yours are clear. Sometimes short and sweet is best, and pictures always help.

Make the information and advice clear and actionable so your community can follow your lead.

4. Keep listening
When you first start with social media, investigate what your future patients are asking for, what the competition offers them and find out how to offer more.

Following your patients on social media allows you to connect better with those you’re trying to please most. Find out what they love about your practice and what you could possibly improve!

For more information
Like these tips? Want to learn more? Schedule a free social media consultation with Likeable Local at www.likeabledemo.com.

Greater NY Dental Meeting, Nov. 30 - Dec. 3
Booth #2910
Here at the GNYDM
Check out Designs for Vision’s latest products at booth No. 5026.

This year, Designs for Vision is introducing the ULTRA Mini 2.5x Telescopes, Nike® Retro and DVI Sport frames, and the NanoCamHD™ loupe mounted video camera.

A pair of ULTRA Mini Telescopes weigh as little as 34 grams (1.2 ounces) and are 40 percent smaller than regular telescopes, thus allowing for easier peripheral vision.

“The ULTRA Mini Telescopes,” Feinbloom said, “like our world-renowned dental telescopes, provide 2.5x magnification that is fully customized to the individual user, providing ergonomic advantages to our customers. Designs for Vision matches the focal length of each telescope to the ideal working distance of our customers. This way, the depth of focus surrounds their ideal working distance, instead of adapting to a pre-set focal length. “We have been working with dentists and hygienists who required true 2.5x magnification but desired a lighter, smaller device for all-day use. Designs for Vision wanted to design and engineer a system that offered all of the features our customers expect of a Designs for Vision product. “The lens system uses the same precision-coated optics as our traditional magnification systems. We can also accommodate eyeglass prescriptions into the ULTRA Mini Telescopes.”

The Nike Retro frames are exclusive to Designs for Vision. Available in tortoise shell, black and translucent gray, the Nike Retro has a classic look. The DVI Sport frames can be used for all magnifications and can incorporate eyeglass prescriptions — providing the protective wrap without any distortion.

The NanoCamHD records digitally at 1080p high-definition resolution and features magnified HD images from the user’s perspective. The complete system includes 2.5x, 3.5x and 4.5x lens systems to match the typical magnifications.

As an added feature, still photographs can be taken from live video feed or during playback mode. The video or still images can be uploaded into a patient file, included in a presentation or course, or shared with a colleague or laboratory for collaborative consultations.

The NanoCamHD complete system includes a color corrected ULTRA Mini LED DayLite® headlight. The combination headlight/NanoCamHD can be attached to loupes or can be worn on a lightweight headband.

The system also includes a foot pedal to enable hands-free operation of the NanoCamHD. Record/pause, mute/unmute and still photography are all controlled by the operator hands-free via the pedal.

For best results, combine the NanoCamHD with Designs for Vision’s dental telescopes. Matching true magnification levels of 2.5x, 3.5x or 4.5x can produce realistic simulation from the user’s perspective. The NanoCam can also be attached to the new Nike Retro frames or the new DVI Sport frames.

Visit Designs for Vision here in New York at booth No. 5026 to see the “Visible Difference” yourself.
Surface concept evolution

New York law takes effect on March 27

The law requiring electronic prescriptions in New York is almost here! On March 27, electronic prescribing of both controlled and non-controlled substances will be mandatory in New York state, and dental professionals will not be exempt from the requirement. Will you be prepared for electronic prescribing?

What is ePrescribing?

ePrescribing is the process by which prescribers electronically submit prescription information directly to a pharmacy. It is considered a safer process than sending a patient on his or her way with handwritten prescriptions, faxing the pharmacy or calling in prescriptions, all of which present a high risk of error.

Many ePrescribing systems can perform medication safety checks, screening for potentially dangerous dosages, drug interactions or allergies; alerting clinicians to generic alternatives; and retrieving patient eligibility information and drug plan authorization requirements. Dental professionals can implement ePrescribing functionality either through dental practice-management systems that have that capability or through a standalone ePrescribing system.

What do I have to do?

Before March 27, all New York dental professionals need to purchase an electronic prescribing application, such as Lexicomp® ePrescribe. Under the provisions of New York’s I-STOP law, Title 10 NYCRR Part 80 Rules and Regulations on Controlled Substances authorizes a practitioner in the state to issue an electronic prescription for controlled substances in Schedules II through V. For electronic prescribing of controlled substances (EPCS), the regulations require a practitioner to register his or her certified electronic prescribing computer application with the New York State Department of Health, Bureau of Narcotic Enforcement (BNE).

To register your electronic prescribing solution with the BNE, fill out the Practitioner EPCS Registration form (DOH-5121). Send the completed form to narcotic@health.state.ny.us with “Practitioner EPCS Registration” in the subject line.

Why should I be ePrescribing?

Even if it wasn’t about to be the law in New York state, ePrescribing has been shown to enhance patient care and help reduce medication errors. It cuts down on handwriting confusion and communication errors. You can use ePrescribing in conjunction with medication decision support features, such as drug formularies and reference information, drug interaction warnings and allergy alerts, to help support safe prescribing decisions.

It is also a more efficient process, often reducing patient wait time to receive prescriptions. ePrescribing can allow you to more easily see your patient’s history and manage your patients’ medication information. Some ePrescribing systems can provide you with reports that show whether a patient has filled or refilled a prescription. With that type of information readily available, it becomes easier to monitor patients’ adherence to their drug regimens.

Wolters Kluwer Clinical Drug Information understands that dental professionals have unique pharmacology information needs apart from those of physicians or pharmacists. That’s why it offers Lexicomp ePrescribe, powered by DoseSpot®, the industry’s only dental-specific ePrescribing applications containing the medication information and alerts you need as a dentist.

Process all prescriptions electronically – including controlled substances – and access valuable Lexicomp drug and interaction information to enhance medication safety and improve the efficiency of your practice.

Learn more about Lexicomp ePrescribe at booth No. 3916. Special introductory discounts are available to New York State Dental Association members.

Here at the GNYDM

For more information on the Lexicomp ePrescribe and how it can help you begin using electronic prescriptions, visit booth No. 3916 or go online to www.lexi.com/eprescribe. Special introductory discounts are available to New York State Dental Association members.
The Right Fit

It’s not just the Zirconia you use, it’s also the lab you choose.

High translucency for increased aesthetics

Pre-shaded Zirconia eliminates white spots after adjustments

Supra gingival and shoulder bevel preparations acceptable

Low wear to opposing enamel

275 South Main Street • Freeport, NY 11520 • www.tncdental.com
By Town & Country Staff

As technology and materials continue to change dentistry, that technology also enhances the dental laboratory in its ability to provide high-quality, strong, esthetic restorations.

Enter Zirlux, full contour (FC) zirconia. With the advent of FC zirconia, dentists now have the option of a durable, precise and resilient restoration for their patients.

Zirlux checks in with a strength of 1,100 MPa and also boasts excellent wear compatibility. Its esthetic qualities are considered superior because of its high-gloss measurement and pre-shaded pucks.

Because the material is computer designed and milled on a five-axis machine, the precision of the fit is also much better than a traditional crown.

Town & Country Dental Studios is proud to offer this product in its suite of materials for crown, bridge and implant restorations.

Town & Country is the region’s largest supplier of Zirlux and provides several restorative choices.

Need to place a crown on a posterior molar? Then Zirlux FC is for you.

If you have a case you’d like to be slightly more esthetic, we have the Zirlux MC (micro-cutback).

Using high-precision, computer-guided milling strategies, a small layer of the crown is removed, and porcelain is skillfully applied for increased esthetics.

And if you are restoring a central tooth, you can rest assured that our Zirlux Plus option (full cutback) will leave your patients smiling from ear to ear.

So check out our booth (No. 5115) at the Greater New York Dental Meeting, where Town & Country is offering you the chance to win five free Zirlux FC crowns!

Orascoptic launches loupe that magnifies at different levels

Power ranges from 3x to 5x

By Orascoptic Staff

Orascoptic™, a leader in vision solutions for dental and medical professionals, introduces EyeZoom, the first and only loupe to offer adjustable levels of magnification ranging from 3x-5x.

Developed to assist health-care professionals in viewing an operating site from multiple perspectives, EyeZoom conforms to fit the custom preference of each individual.

Whether you are an endodontist performing a procedure at 5x or a cosmetic dentist applying a veneer at 3x, the loupe maintains a consistent working distance at each magnification power level.

Co-engineered by Orascoptic and Konica Minolta, the patent-pending EyeZoom technology provides edge-to-edge clarity and high-definition resolution. Designed for an ideal symmetry between style and performance, the lightweight magnesium bezel adds an esthetically pleasing style to this medical device.

EyeZoom is available on the Legend™, Rave™, Rydon™ and Victory™ frames and can be configured as a through-the-lens (TTL) loupe.

Orascoptic is a member of the KaVo Kerr Group.

About KaVo Kerr Group

Phophy paste offers four grits and splatter-free application

Gelato available in a wide range of flavors

By Keystone Industries Staff

- With such a wide range of assortments to choose from on the prophy paste market, how are you so sure one paste is the best for you and your patient? Your search can now come to an end with Keystone Industries’ Gelato prophy paste.

- Coming in four grits and multiple flavors, this non-splatter, gluten-free formula with 1.23 percent APF and unique cleaning and polishing agents is a sure-fire way to please your hygienists’ needs and any picky patient as well, according to Keystone.

- Dental Advisor named Gelato its Top Prophy Paste back-to-back in 2013 and 2014, adding to the credibility of this quality product that Keystone says is essential for every dental professional.

- For your convenience, Gelato comes in boxes of 200 individual disposable cups or 6 oz and 12 oz jars.

- The paste is available in four different grits (fine, medium, coarse and x-coarse) for various stain removal needs. Typically, hygienists use the fine grit for routine use, and the medium grit gives a little more stain removal power. The coarse pastes are required for removing moderate to heavy stains. No matter the job, Gelato Prophy Paste provides exactly what dental professionals need.

- Keystone Industries continues to put forward the largest assortment of great-tasting Gelato flavors, such as piña colada and orange sherbet. The paste line also has mint, cherry, bubble gum and raspberry for a plethora of flavor options to satisfy picky clients. The individual cups are clearly labeled for quick retrieval and application.

- Ordering couldn’t be easier: Go to the website, www.keystoneind.com, and then choose your preferred dealer.

- Only one question remains: What are you waiting for?

The Future is Here

The 36th Australian Dental Congress
Brisbane Convention and Exhibition Centre - an AERI 1600th venue
Wednesday 25th to Sunday 29th March 2015.

Invitation from the Congress Chairman

On behalf of the Local Organising Committee of the 36th Australian Dental Congress, it is with great pleasure that I invite you to attend Congress and enjoy the city of Brisbane.

Over three and a half days, high-achieved international and Australian speakers supported by contemporary researchers, will present a wide range of sessions relevant to practice. These presentations will be complemented by hands-on workshops, lunch and learn sessions, specific programmes for members of the dental team. Social activities will be available for relaxation purposes.

The Brisbane Convention and Exhibition Centre is adjacent to the Southbank Precinct on the banks of the Brisbane River. Nearby is the Queensland Performing Arts Complex, the Queensland Museum and the Queensland Art Gallery and Gallery of Modern Art. A comprehensive industry exhibition will be held alongside the Congress enabling delegates access between scientific sessions to view the latest in equipment and materials.

Come and join us for the scientific programme, the opportunity to meet colleagues and the experience Brisbane has to offer.

Dr David H Thomson
Congress Chairman
36th Australian Dental Congress
