EXHIBITORS

Tools for success

E xhibiting at AAE17 in booth No. 524, Roydent Dental Products has a full line of products designed for endodontic success. For cleaning and shaping, Roydent offerings include C-Files, K-Files and Hedstrom Files. For obturation, the company supplies 2Seal and 2Seal easymiX and many other products.

The largest variance between hand files is a #10 and #15. This variance can be challenging while instrumenting a canal, which is why Roydent created the 12.5 mid-sized C-File. This half step between files adds precision and confidence when you need it most, according to the company.

Roydent’s C-Files are designed to break through calcified canals. They feature heat-tempered steel, making them stiff yet flexible. They feature sharp edges twisted to the tip, and the non-cutting tip follows the canal curve.

K-Files and Mid-Sized K-Files, meanwhile, feature a conical, non-cutting tip that follows the canal curve, providing reduced risk of ledging. A contoured, ribbed handle provides exceptional tactile control for reduced finger fatigue, according to the company. Square cutting blades in smaller sizes (up to #40) and triangular cutting blades in larger sizes (45 and above) provide safety, flexibility and sharpness, the company says.

Hedstrom files offer outstanding flexibility and high torsion strength because of optimal geometry and design, and they feature a custom-designed helix angle for each size instrument.

For filling the canal, Roydent offers 2Seal and 2Seal easymiX, designed to “take the mess out of mixing.” The product comes with a convenient auto-mix syringe with 360-degree flex tip providing an automatic 1:1 mix ratio. According to Roydent, it works with all obturation techniques: warm, cold and thermal.

More information on Roydent Dental Products is available by calling Roydent customer care at (800) 992-7767 or by visiting the company online at roydent.com. You can also visit the company at AAE17, booth No. 524.

IT’S TIME TO GET REAL.

WHAT DO YOUR PATIENTS REALLY WANT?

Patients Want to Keep Their Real Tooth.
In a 2016 study published in JOE, patients named tooth retention as a top priority, second only to trust and communication about treatment options.

Patients Want to Avoid A Root Canal.
Consumers have feared the idea of standard RCT for decades. The result? Patients and providers alike are opting for implant-supported crown replacement instead of RCT.

Patients Want an RCT Alternative.
Enter the GentleWave® Procedure—a minimally invasive, single-appointment procedure that delivers a higher standard of cleanliness throughout the root canal system—and a lower chance of failure that can result in tooth extraction.

Talk to Sonendo® about the GentleWave® System today. Make the real difference for your patients and the economy of your practice. Visit sonendo.com/get-real.

Debris left behind after standard RCT
A higher standard of clean with the GentleWave Procedure

Changing dentistry, one seat at a time

By RGP Staff

RGP first introduced the 400-Straddle Stool back in January of 2016.

Since then, the company asserts, the response has been overwhelming, and the dental community has been impressed with what the new stool has to offer.

The company says it has taken its top-selling 400-D stool concept and blended it with the Saddle-style concept to form the most versatile seating option yet.

The 400-Straddle allows the user to sit low, medium or high, all while putting the hips and pelvis in proper alignment to keep the spine in an upright and anatomically correct posture.

The seat cushion eliminates all risk of sciatic pain and also, according to the company, allows the user to snug in nice and close because of the downward positioning of the legs.

Be sure to stop by the RGP booth, No. 632, and give it a try.

“You would be surprised what a comfortable and supportive stool can do for your overall health and well-being,” said Jason DeCosta, RGP sales manager.

Here in New Orleans

Need a rest? Stop by the RGP booth, No. 632, to take a seat on the 400-Straddle Stool and see what it has to offer.
Porter’s SILHOUETTE Nasal Mask is a revolutionary new low profile, disposable nasal mask and breathing circuit.

The Porter SILHOUETTE Nasal Mask’s unique design eliminates the hassles of using nitrous oxide and offers many advantages including:

- Unobstructed access to the oral cavity
- A predictable nitrous experience
- Enhanced scavenging efficiency reduces N₂O exposure
- Disposable mask and circuit for improved infection control
- Built-in capnography luer lock connection!

Visit us in New Orleans to learn how you can easily start using the Porter SILHOUETTE Nasal Mask!

AAE 2017 ANNUAL SESSION,

Silhouette is patent pending.
Try the Silhouette Nasal Mask for predictable nitrous oxide analgesia

See the product at the Porter Royal Sales booth, No. 139

By Porter Royal Sales

The Silhouette Nasal Mask is the first truly innovative new product for nitrous oxide use in decades. Nothing like it exists. Imagine a nasal hood that does not obstruct access to the oral cavity. Imagine a nasal hood that delivers and scavenges nitrous oxide more efficiently than any other nasal hood. Imagine a nasal hood that provides predictable results for the dentist and a pleasant experience for the patient.

The imagination is over — the Porter Silhouette will revolutionize how nitrous oxide is used in the dental practice.

The Silhouette Nasal Mask is a single patient use disposable nasal mask and circuit. Featuring four size options (pediatric, small, medium and large), the Silhouette is designed with the lowest possible profile, making it easier for you to work around.

In addition to the innovative shape and design, Silhouette has an adhesive strip for the bridge of the patient’s nose — securing the mask in place. This virtually eliminates gas flowing into the patient’s eyes and more effectively scavenges the exhaled gas, addressing the concern of health-care provider safety. Infrared videos demonstrating this efficiency can be viewed on the Porter website at www.porterinstrument.com/silhouette.

Silhouette also allows for the efficient and effective administration of nitrous oxide, creating a more predictable analgesic experience for each patient. Dentists may find they can actually use less gas, as the potential for the patient to inhale ambient air is diminished when using the Silhouette Nasal Mask.

As a single-use disposable product (both the mask and 36-inch tubing), setup and room turnover times can be improved. There is also less time needed for infection control protocols (compared with standard nitrous breathing circuits).

Dentists and staff can now benefit from giving their patients nitrous oxide and oxygen in the practice — and they can work more efficiently with the new Silhouette Nasal Mask.

Visit the Porter booth, No. 139, for a demonstration.

An obturation device that can heat and vibrate

By Medidenta Staff

The RootBuddy, now available from Medidenta, is the only endodontic obturation device that can heat, vibrate or do both simultaneously.

Clinical studies prove that RootBuddy’s combination of heat and vibration technology results in a denser, more compact filling of the root canal space, according to the company.

The RootBuddy handpiece can generate heat from approximately 50 degrees C to 350 degrees C/120 degrees F to 660 degrees F, improving the flow of thermoplastic filling materials.

The handpiece also produces a gentle, low-frequency (100 Hz) vibration that ensures the filling material is free of voids and air pockets.

This system is perfect for quickly heating the filling material, for distributing it laterally or vertically and for condensing it in the root canal, according to the company, which asserts that the result is an effective three-dimensional apical and coronal filling of the root canal.

To learn more about the RootBuddy, visit www.medidenta.com, call (800) 221-0750 or stop by the Medidenta booth, No. 434.
