Wake up with keynote speaker Kevin Wanzer

- If you're up bright and early this morning, there is no better way to kick off the holiday weekend in Honolulu than with the 2018 keynote and motivational comedian Kevin Wanzer.

From 7:30 to 9 a.m., in the Kalakaua AB room of the Hawaii Convention Center, you can hear this very funny speaker who served on the staff of and appeared on “Late Night with David Letterman” as well as authored the book “Choose to Love.” Wanzer got his start early. At his lemonade stand when he was just 8 years old, he offered passers-by two types of refreshment: a cold cup of lemonade or dead-on stand-up renditions of Steve Martin comedy routines.

Decades later, the lemonade and Martin routines are gone. The refreshment, however, is still to be had. As a humorist, motivational comedian and keynote speaker, Wanzer has been earning rave reviews for more than 30 years. He has been noted nationally as one of the most effective and entertaining speakers for inspiring and empowering audiences, celebrating Ohana and the Spirit of Aloha.

Through stories and humor, he helps people reconnect with hidden passions, embrace diversity and celebrate community through laughter, all of which are perfect for a Friday morning here at AAPD.

EyeSpecial C-III
THE DENTAL CAMERA THAT MAKES IT EASY

- 8 Dental shooting modes – Easier, faster and more reproducible images
- Auto-cropping, smart focus and zoom
- Auto flash adjustment for true color
- 3.5 inch LED/LCD touchscreen – Works with exam gloves
- Water/chemical resistant – Essential for infection control in the office
- Ultra-lightweight body: approximately 1lb

www.shofu.com | 800.827.4638
promises to be packed with attendees ready to start their day feeling refreshed and invigorated.

The AAPD Exhibit Hall continues to expand with not only new exhibitors but fun and interactive booths. The Tech Bar, which features a series of educational sessions throughout the day, is back by popular demand, a Live Podcast Booth has been added and there is an entire booth dedicated to a life-size mosaic in the making.

Stop by the Live Podcast Booth, located at the Tech Bar Theater, between 10 and 10:30 a.m. to hear Roy Delarosa’s “5 Things I Can Do to Make My Practice Huummm” or between 1:30 and 2 p.m. to hear Nestor Cohenca’s “Getting Up To Date in Pulp Therapy for Young Permanent Teeth.”

If you’re interested in autism spectrum disorder (ASD), you won’t want to miss Session 120: “Update on the Spectrum,” taking place from 9:30 a.m. to 12:30 p.m. today. ASD is one of the most common developmental disorders diagnosed worldwide. According to the Centers for Disease Control, one in 68 American children have been diagnosed with it. This high prevalence means that every pediatric dentist will encounter children with autism in their practice. Presenters in this session will discuss practical, patient-centered treatment approaches for this population. Raphael Bernier, PhD, will review the medical and behavioral aspects of ASD, while Travis Nelson, DDS, MSD, MPH, will cover dental implications and treatment strategies for care of this patient population.

Another highlight takes place this evening, from 7 to 10 p.m. at the Bishop Museum. The AAPD Welcome Reception: Aloha Fest will offer you the chance to immerse yourself in the unique Aloha way of life here on the island, from the ukuleles in the courtyard to the stunning exhibits of Hawaiian Hall. You can also discover the stars in the J. Watumull Planetarium and learn how the first Hawaiians navigated to the islands. Check out the science center where you can learn how volcanoes first formed the eight islands that make up the Hawaiian chain.

Out on the Great Lawn, mosey your way around a fun culinary journey inspired by flavors and festivals of the islands, from trendy poke to traditional poi and a smoking huli huli experience. Stop by registration to get your tickets to this event.
There’s been a massive amount of research into dental anxiety, with good reason: Dental anxiety keeps thousands of people from visiting the dentist every year. Children are especially susceptible to this anxiety, particularly if they have never been to a dentist before or they are unsure about what to expect.

Incentivizing visits will help them positively anticipate each trip, particularly if they are facing multiple visits for successive treatments. Here are a few ideas to help you create a program that fits your practice.

Help patients grade oral health
A daily oral health quiz helps keep young patients on track for oral care success. It can be as simple as a checklist with questions like: Have you brushed your teeth today? Did you brush twice today? Did you floss today? Have them bring their list in each visit for a special reward. A brushing chart works well for this and can be customized with your practice name and information so they’ll remember your positive reinforcement daily.

Challenge patients to succeed
There’s nothing a child will remember more than a challenge. The idea is to turn his or her oral health into a game. One tried-and-true method is the 2-2-2 challenge. At its essence, all you’re doing is asking children to see their dentist twice a year and brush twice a day for two minutes each time. Turn it into a challenge by giving them a practice-themed notepad and pencil to record their progress. That will entice them into forming good habits from an early age and keep you top of mind.

Offer tiers of prizes
For every cavity-free visit or step in the treatment plan, allow the patient to choose a higher tier of prizes. It gives kids something to look forward to and a reason to behave well and take care of their teeth. At their first visit, they might not have been able to get the plush animal, but you can explain they’ll be able to earn it with good behavior and habits over time. You don’t need to break the bank for this, and the reward tiers don’t have to grow excessively. The difference between a bracelet and a heart necklace might be all the incentive they need.

Add to their collection
Limited edition collectibles are an age-old trick used to help people see an increased value in certain items. It works really well with children because they usually want the exclusive toys or stickers. The value grows if you have the full set, too.

By using “exclusive” prizes like keychains that come in different designs or stickers that can only be collected at subsequent visits, it gives a positive incentive to children who may need a lot of dental work. Rather than seeing their dental visits as a chore, they have a chance to complete their collection.

Pediatric dentists and parents will love I Love My NuSmile

By Diane Johnson Krueger, NuSmile Founder and CEO

Since we started NuSmile more than 28 years ago, every step we’ve taken has been guided by one of two passions: Our passion for helping pediatric dentists be more successful, and our passion for restoring the smiles of pediatric patients.

Of course, our ideal initiative is one that allows us to indulge both passions, and that’s certainly the case with our new I Love My NuSmile service. The centerpiece of the service is ilovemynusmile.com, a dedicated website that helps parents not only understand the best restorative dental options available for their children but also provides a doctor locator feature that makes it easy for parents to find a NuSmile provider nearby who offers NuSmile’s market-leading esthetic pediatric crowns.

We’re very excited about educating parents about our two esthetic solutions – NuSmile ZR Zirconia crowns and NuSmile Signature Pre-Veneered crowns – that provide a combination of lifelike appearance, function and durability that is consistently confirmed by independent testing as well as by doctor and parent feedback. We believe that using ilovemynusmile.com, as well as social media and other convenient platforms, to make parents aware of these options and the dentists who offer them is not just the smart thing to do; it’s the right thing to do!

Our website went live May 1. We encourage pediatric dentists who offer NuSmile esthetic crowns to visit the site and apply by clicking the Dentist dropdown menu on the homepage and selecting “Sign Up.” Once they submit their information, a NuSmile team member will work with them to personalize their contact information, upload a photo and write their own practice description. Advertising campaigns to the public will begin on June 1.

We could not be more excited about the potential of I Love My NuSmile to help the best pediatric dentists in the United States and Canada connect with even more of the children who really need them.
Ultimate diagnostic X-ray images. Instantly.

Dentsply Sirona knows the value of instant imaging - less time for your patients to sit still and a quicker diagnosis for you. Not to mention recognizing and correcting imaging errors immediately. We also recognize that your patients start small and grow with you, so we provide 3 sensor sizes to suit them no matter what age or size.

All of this is connected to Sidexis 4 for a unique image management, treatment planning and patient communication experience.

Visit www.dentsplysirona.com to learn more and schedule a demonstration today!
Anutra Medical partners with Podium to enhance platinum member benefits

By Anutra Medical Staff

Anutra Medical, a medical device company, provides a local anesthetic delivery system that gives healthcare providers the ability to mix and dispense buffered anesthetic. This ultimately helps to streamline a practice’s workflow as well as enhance patient experience, according to the company.

The benefits of using the Anutra Local Anesthetic Delivery System are many, the company asserts. By buffering local anesthetic, practitioners can offer an injection that is fast-acting and reliable, allowing the majority of patients to get numb seven times faster than traditional anesthetic. Further, buffered anesthetic provides a more comfortable injection for patients. The average patient, on a Likert scale from 1 to 10 where 1 is “totally painless” and 10 is “very painful,” rates a buffered local anesthetic injection from the Anutra Local Anesthetic Delivery System a 1.81, averaging “painless.”

A major benefit of implementing buffered anesthetic into a health-care practice, particularly in the dental office, is the time savings. The average dental office reported between 15 and 20 minutes saved per appointment where buffered local anesthetic was used.

Anutra Medical has redefined how practitioners can receive their supply of local anesthetic by offering a platinum membership. This membership gives the dentist the option to receive everything they need to buffer and administer anesthetic in one simple membership package.

Traditionally, practitioners would have to piece together different components for giving injections, including but not limited to topical, syringes, needles and the anesthetic. Via the platinum membership, Anutra Medical provides this to the practitioner in one simple step. Further, Anutra provides other offers to its platinum membership, including working with Podium.

This week, Anutra announced its partnership with Podium, a leading customer communication platform for local businesses. Through its messenger and review products, practitioners are able to streamline their online review invitations.

Patients who have had an appointment are sent an invitation to review their experience via text within minutes, when reviews are most accurate and likely to be acted upon. This partnership will save dentists time as well as increasing the number and quality of their online reviews on Google, Facebook and other key sites.

By working together, Anutra is subsidizing the cost of a Podium subscription exclusively to its platinum members.

“We are constantly looking for innovative ways to help practices grow their patient base and spread the word that patients no longer should fear an injection,” Ryan Vet, VP of marketing at Anutra Medical, said. “Further, with the efficiencies that come along with utilizing buffered anesthetic in a practice, it only makes sense that we, Anutra, help our platinum members continue to grow their patient base to help their practice become even more profitable.”

Platinum members of Anutra are immediately eligible for the Podium offering and can contact Anutra for more information. Anutra will be subsidizing up to $1,650 off the first year’s subscription of Podium to eligible platinum members.

Planmeca USA introduces its ULD certification program

By Planmeca USA Staff

In March, during the Hinman Dental Meeting in Atlanta, Planmeca USA introduced a unique certification program designed to encourage dialogue between patients and their dental practitioners on imaging radiation levels.

The Helsinki, Finland-based dental technology company, with North American headquarters in Roselle, Ill., manufactures and sells imaging equipment, such as the Planmeca ProMax® 3D family of units.

This CBCT system has a unique ultra-low-dose (ULD) feature that delivers a lower dose of radiation while achieving imaging quality that allows clinicians to provide an optimal diagnosis.

“A Planmeca ProMax 3D system using ULD can drastically reduce patient radiation by up to 77 percent — without a statistical reduction in image quality,” said Brett Hines, president of Planmeca USA.

Hines cited a study published by Dr. J.B. Ludlow and D. Koivisto that demonstrates radiation doses used in dental imaging can be reduced without loss of diagnostic quality. The company is not aware of any other dental imaging manufacturer, with an independent study, that can claim the same.

Because of attention in the lay press about this issue, it’s more likely that dental patients, too, may have questions and concerns.

To help encourage these conversations about imaging safety, Planmeca USA developed a complimentary ULD certification program exclusively for Planmeca ProMax 3D ULD-capable systems.

**ULD certification program features:**

- Planmeca ULD certified office display materials to inform patients that you are using advanced safety/quality care X-ray equipment.
- Access to downloadable digital materials for use on your website and social media outlets to educate and market your practice as Planmeca ULD certified.
- Ability to become part of a searchable database of Planmeca ULD certified dentists, for prospective patients who seek low-radiation imaging practices in their area.
- A complimentary program available to all practices using Planmeca ProMax 3D Ultra Low Dose enabled systems.

The Planmeca ULD certification registration program is available at www.planmeca.com/na/uld/.

To see the study, go to https://goo.gl/UPW5vL.

Enhance your practice with Porter nitrous oxide systems and nasal masks.

Porter offers the widest selection of flush-mount and portable flowmeters in the industry.

In addition, Porter’s Silhouette Nasal Mask and breathing circuit features a patented low profile design for unobstructed access to the oral cavity.

Learn more and watch videos at: www.porterinstrument.com/silhouette

Visit us at AAPD 2018, Booth #525!

Order a Porter Silhouette Nasal Mask 12 pack at the show and receive a free retrofit kit – a $55 value!
Try the Silhouette Nasal Mask for predictable nitrous oxide analgesia

By Porter Instrument Staff

Imagine a nasal hood that does not obstruct access to the oral cavity. Imagine a nasal hood that is so lightweight the patient barely notices it. Imagine a nasal hood that delivers and scavenges nitrous oxide more efficiently than any other nasal hood. Imagine a nasal hood that provides predictable results for the dentist and a pleasant experience for the patient.

The imagining is over. The Silhouette Nasal Mask is a single-patient use disposable nasal mask and circuit. Featuring four size options (pediatric, small, medium and large), the Silhouette is designed with the lowest possible profile, making it easier for you to work around.

Silhouette has an adhesive strip for the bridge of the patient’s nose — securing the mask in place. This eliminates gas flowing into the patient’s eyes and more effectively scavenges the exhaled gas, addressing the concern of health-care provider safety. Infrared videos demonstrating this efficiency can be viewed on the Porter website at www.porterinstrument.com/silhouette.

Silhouette also allows for the efficient and effective administration of nitrous oxide, creating a more predictable analgesic experience for each patient.

As a single-use disposable product (both the mask and 36-inch tubing), set up and room turnover times can be improved. There is also less time needed for infection control protocols (compared with standard nitrous breathing circuits).

To see the Silhouette Nasal Mask, stop by booth No. 529. For more information or to order, visit www.porterinstrument.com/Silhouette or call (215) 723-4000.
NO MORE PAIN

Planmeca’s extraoral imaging technology provides comfort to all patients by eliminating large, invasive, in-mouth sensors.

See Planmeca at booth #531
American Academy of Pediatric Dentistry Annual Session

Planmeca ProMax® 2D S3
No more pinching, gagging, screaming or tears

- Extraoral bitewings capture a larger diagnostic area versus intraoral modalities*, better caries detection
- Child (pediatric) mode for each standard and optional 2D program to reduce radiation dose
- All 2D units are Planmeca Romexis® software-driven, and upgradeable for future technology advances

*According to "Efficacy of ProMax Bitewings vs. Intraoral Bitewings." For a copy of this study, please contact Planmeca USA.

PLANMECA
Planmeca USA, Inc., 100 N. Gary Ave., Roselle IL, 60172 | (630) 529 2300 | www.planmecausa.com
As a pediatric dentist, you need a digital intraoral sensor that provides you with quality images quickly. With Schick 33, you can show your patients and, more importantly, your parents exceptional images and diagnose caries in kids faster, better, safer and easier than traditional film X-rays, according to Dentsply Sirona, the company behind the product.

Additionally, it’s important to have a variety of sensor sizes on hand when dealing with children. The Schick 33 digital intraoral sensor comes in three sizes: 0, 1 and 2.

For kids younger than 6 years old, the size 0 is great for bitewings. After permanent first molars are in at 6 to 7 years old, a size 1 can work well. If second molars have erupted at 12 to 13 years old, a size 2 typically works.

According to the company, the right-sized sensor can help you get the right images the first time — easily, safely and comfortably.

To learn more about the Schick 33 digital intraoral sensors, stop by the Dentsply Sirona booth, No. 736.

---

The EyeSpecial C-III is the first digital camera designed exclusively for dentistry. Intended for predictable and consistent clinical photography, case documentation, lab collaboration and patient education, the EyeSpecial C-III achieves brilliant images with simplicity and convenience. Equipped with a high-quality sensor and unique FlashMatic module — a proprietary system of flashes and filters — this intelligent camera can demonstrate true-color reproduction and an exceptional depth-of-field range.

Like smartphones and tablets, the EyeSpecial C-II is considered highly intuitive and user friendly. It possesses eight pre-set dental shooting modes for efficient dental photography and features numerous smart functions that can enrich peer-to-peer and lab collaboration as well as patient education.

To learn more about the EyeSpecial C-III, stop by the Shofu booth, No. 806.
