CDA offers significant savings on supplies through e-commerce site

Online marketplace created for CDA member dentists

The California Dental Association is pleased to announce its offering of online dental supply shopping through its subsidiary, The Dentists Service Company. TDSC offers a group buying program through its e-commerce marketplace — an easy-to-use online shopping site that leverages the buying power of CDA's 27,000 members to secure significant savings on dental supplies and helps dentists lower the overall cost of providing care to their patients.

As a benefit of CDA membership, dentists can visit the TDSC e-commerce marketplace and take advantage of the discounts available for CDA members.
Restorative Strip System

Simple & Easy

Our system makes **finishing and polishing** crowns, composites, veneers, and inlays/onlays simpler and easier than ever. **Adjust** proximal contacts in-mouth, **clean** out trapped cement debris, and **polish** to restore a natural finish.

SAVINGS – from page 1

dentists licensed in California can shop the TDSC Marketplace to take advantage of negotiated low pricing and discounts based on aggregate volume. CDA members enjoy free shipping and save an average of 20 percent off the manufacturers’ list price on more than 25,000 dental supplies. Through trusted, authorized distributors, the marketplace offers supplies from major manufacturers, including Dentsply Sirona, 3M, KaVo Kerr and GC.

“Dental supply purchasing has long been dominated by large corporate suppliers. Through the marketplace, we’re providing significant savings on dental supplies and reduced overhead,” said CDA President Natasha Lee, DDS. “The discounts allow our members to remain competitive with large dental service organizations that cut special deals with dental suppliers.”

As e-commerce has become the norm, shopper feedback has been overwhelmingly positive, with exponential month-over-month growth. After a phased launch, 1,200 CDA members had already saved more than a half-million dollars, allowing them to provide more cost-efficient services to their patients.

“Our entry into e-commerce may be unprecedented for a state dental association, but the move is timely as the $10 billion dental products industry undergoes a disruption in the way dentists purchase supplies for their practices,” Lee said. “We’re in a position to offer lower costs to our members, including those in rural areas who have adopted the marketplace as a trusted source for dental supply purchasing.”

The TDSC Marketplace is now in a position to expand to other states, starting in the West and Northwest regions, giving dentists another option for purchasing some or all of their supplies.

“There’s really no organization better positioned to offer this member service than a dental association whose best interests are with dentists and the patients they serve,” Lee said.

DentalEZ shows off two next-generation products

StarETorque customizable electric system and the first InOffice workstation for in-office labs promise versatility, simplicity

By DentalEZ Integrated Solutions Staff

DentalEZ, Integrated Solutions recently launched two new products. The new Star®ETorque™ advances the electric handpiece with a one-touch system that allows the practitioner to move seamlessly between high- and low-speed applications, according to the company. From caries removal to root canal treatment, StarETorque covers a range of operatory needs with a lightweight tool that combines power, performance and flexibility.

The other innovative product showcased at the DentalEZ booth, No. 416, is the InOffice™ workstation developed for the dental practice. This new workstation can be customized for today’s needs, with the flexibility to add new features as the needs of the practice change.

“We’re excited to debut these new products at CDA Anaheim,” said Bob Senesac, DentalEZ’s senior director of marketing. “As high-performance partners of the dental industry, we are constantly striving to develop new products that provide solutions to everyday challenges in the delivery of oral health care. We’re focused on simplification and efficiency, value-based products and outstanding customer service and support.”

StarETorque electric system

The StarETorque uses a small, lightweight, brushless motor for less noise and vibration to benefit both patient and dentist. The motor is autoclavable, with six customizable operative modes for both endodontic and preparatory procedures, which provide the ultimate in flexibility, according to the company.

“This compact, intuitive system gives dental professionals the freedom to work seamlessly through a variety of procedures,” said Eric Reno, senior product line manager of handpieces. “It’s truly customizable, letting the user move from high-speed to low-speed settings with a simple touch.”

The motor control unit of the StarETorque features a bright, easy-to-read color touch screen and a compact design for a small footprint as a standalone or detachable for modular mounting.

“We wanted to deliver a product that was intuitive, innovative and individual,” said Reno.

InOffice workstation for the dental practice

DentalEZ brings that same level of customization to workstations, as well, according to the company.

It all starts with the basics: A frame, legs and a counter top. From there, the options to customize are endless. Add the features you need, including overhead lighting, an air gun, a handpiece and more. You also have aesthetic choices, such as steel color and solid surface countertops.

InOffice gives dental professionals the opportunity to make flexible workstations that work best for them. A key feature is front dust collection. The dust collection system has the highest particle capture rate compared with leading brands, based on independent testing, according to the company.

“We wanted to deliver a product that would allow the dental professional the flexibility to add some features as their needs change,” said Kim Pingarr, senior product line manager of lab workstations. “Being able to select the features you’ll use day-to-day makes for a more productive, more enjoyable work environment.”

About DentalEZ

DentalEZ Integrated Solutions is committed to providing real solutions to everyday challenges in oral healthcare by uniquely combining innovation focused on simplification and efficiency in value-based products and outstanding customer service and support, according to the company. DentalEZ manufactures a full line of products and well-known brands including StarDental®, DentalEZ Equipment, RAMVAC®, NevinLabs™ and Columbia Dentoform®. The ContacEZ Restorative Strip System is an innovative, precision dental strip system designed to achieve ideal proximal contact adjustment and complete marginal seating of crowns, veneers, inlays/onlays and proximal contouring of composite fillings simply and easily, according to the ContacEZ, the company behind the product.

The simple adjust-clean-polish system makes performing some of the trickiest tasks in restorative dentistry as easy as one-two-three, the company asserts.

• Adjust: Use the Black Diamond Strip to adjust proximal contacts of crowns in-mouth, eliminating excess pressure between the restoration and the adjacent teeth without opening the contact. Try the Orange Serrated Diamond Strip to adjust proximal contacts of onlays and composites.

• Clean: Use the White Serrated Strip and Blue Serrated Strip to cut and clean out trapped cement debris in the interproximal space after crown cementation. The White Serrated Strip is thin enough to remove excess cement without disturbing veneer placement before light curing, and the Blue Serrated Strip is strong enough to remove light-cured cement remnants.

• Polish: Use the Gray Final Polishing Strip to polish proximal contact surfaces of restorations, removing surface roughness and diamond marks to restore a natural finish in one easy step.

ContacEZ says not to just take its word for it, asserting the Restorative Strip System has become a mainstay in the offices of doctors, educators and influencers all over the world.

“ContacEZ is an excellent system to handle interproximal refinement for many dental restorative procedures,” said Dr. Robert Lowe.

“I wouldn’t consider bonding a veneer case without a set of these strips,” said Dr. Michael DiTolla. “ContacEZ is so important for modern dentistry, especially in composite fillings ... Every dentist should use ContacEZ nearly every day for nearly every patient,” said Dr. David Clark. Join ContacEZ at booth No. 2142 to experience how the Restorative Strip System can benefit your practice and your patients.
If you can’t stand the heat, get out of the operatory.

70¢ angle...
Made in China.
No alternative.

$220 sheath.
They’ll need several.

70¢ angle...
Made in USA.

Heat sterilizable.

NOT heat-tolerant.

ása brings super-simple compliance to all 50 states.

In eleven states, state dental practice acts mandate the heat sterilization of handpieces. They don’t just recommend it. They require it. In the other 39 states, CDC Guidelines apply. And the CDC says, “Dental handpieces and associated attachments ... should always be heat sterilized between patients,” adding, “If a semicritical item is heat-sensitive, DHCP should replace it with a heat-tolerant or disposable alternative.”

With the movement in compliance shifting toward sterilization, why buy a handpiece that’s not heat-tolerant? Instead, talk to us about èsa and the lube-free èsamate prophylaxis system. Or, if you already own a Midwest Shorty®, Rhino® or Star® Titan® handpiece, then put an èsa on it and be compliant wherever you work.

For samples of the èsa DPA or more information, visit www.preventech.com/esa-dpa/

“Visit us at CDA Anaheim at booth #1323”

*State Dental Practice Boards in CA, FL, IN, KS, MO, NM, OH, OR, SC, VA and WA require semicritical items to be sterilized after every patient. **Summary of Infection Prevention Practices in Dental Settings,” Centers for Disease Control and Prevention, March, 2016. P. 14. *Èsa is available for Star Titan, Midwest Shorty and Rhino Handpieces. All third party marks – ® and ™ – are the property of their respective owners.
Create ‘brilliant’ restorations with COLTENE’s BRILLIANT EverGlow Universal Composite

By COLTENE Staff

BRILLIANT EverGlow is a universal submicron hybrid composite distinguished by easy polishability, gloss retention, ideal handling and exceptional blending properties, according to COLTENE, the company behind the product.

BRILLIANT EverGlow’s filler technology is engineered to provide an ideal combination of long-lasting esthetics, handling convenience and mechanical strength. Submicron glass fillers support excellent polishability and gloss retention, according to the company. Additional pre-polymerized fillers, which have the same composition as the uncured composite, lower volume shrinkage and improve the sculpting properties of the paste.

BRILLIANT EverGlow shows an exceptionally smooth surface and satin shine directly after placing the filling, according to the company. This simplifies the task of polishing, allowing highly esthetic restorations to be performed in minimal time — especially when used with COLTENE’s ALPEN ShapeGuard Composite Plus polishers.

Visit COLTENE at booth No. 2250 to try BRILLIANT EverGlow and see why Dental Product Shopper recently evaluated BRILLIANT EverGlow as a “Best Product” in the composites category. You may also visit everglow.coltene.com to request a free sample.

Solvay Dental 360 shows off its paradigm-shifting polymer

By Solvay Dental 360 Staff

Solvay Dental 360™ is bringing Ultaire™ AKP, a high-performance polymer for removable partial denture (RPD) frames, here to the CDA Presents the Art and Science of Dentistry in Anaheim.

Ultaire AKP was specifically designed to fill the gap between metal RPDs, which can be too rigid and stiff, and other polymer frame materials that can be too flexible.

Here at the show, Solvay Dental 360 will have a special offer for dentists who visit its booth: Two Ultaire AKP partials for the price of one. To receive the offer, dentists can stop by booth No. 590.

“Dentists and patients alike are demanding better materials for RPDs, and Ultaire AKP delivers in a way that metal and other polymer options simply cannot,” says Shawn Shorrock, global director, Solvay Dental 360. “We saw an unmet need to replace metal in dental materials, similar to other markets we serve such as orthopedic and cardiovascular, and we worked closely with dentists to ensure Ultaire AKP best serves their needs and those of their patients.”

As patients become more aware of the effects of metal — the potential allergies, toxicity and taste — they are also becoming more proactive, asking for partial dentures that feel natural, comfortable and are esthetically appealing. Ultaire AKP is an innovative aryl ketone polymer that provides a biocompatible, lightweight, metal-free, non-irritating and more esthetically pleasing alternative to traditional metal RPD frames, according to the company.

Ultaire AKP is a rigid material — not flexible — suitable as a metal replacement and different than the other non-metal materials currently on the market, the company asserts. It is both strong enough and tough enough to be tooth-supported and help reduce bone loss, yet it is flexible enough to engage undercuts more deeply.

Making multiple adjustments to a milled RPD can be time-consuming and frustrating for patients and dentists alike. Furthermore, months or even years of adjustments tend to wear down once-healthy teeth. Not only does Ultaire AKP provide an esthetically pleasing, biocompatible alternative to metal, once an RPD made out of Ultaire AKP is designed and fitted, adjustments should not be necessary — saving the dentist and patient valuable time.

“Ultaire AKP is a paradigm-shifting polymer — it really hits the sweet spot between metal and the flexible systems on the market today,” says Ryan Murphy, PhD, technology manager and polymer scientist at Solvay Dental 360.

“Ultaire AKP is a paradigm-shifting polymer — it really hits the sweet spot between metal and the flexible systems on the market today,” says Ryan Murphy, PhD, technology manager and polymer scientist at Solvay Dental 360.

Here in Anaheim, company offers dentists special pricing for premium alternative to metal partials

To learn more about Ultaire AKP, stop by the Solvay Dental 360 booth, No. 590.

THE SCIENCE OF VISUALIZATION

TAKE ADVANTAGE OF OUR EXPRESS SHIPPING SERVICE ONLY AT BOOTH 1334

Order your custom loupes during the show and receive them the following week!
(Standard lead time is 3 weeks)

Plus, SAVE BIG on our award-winning loupes & lights during this year’s CDA South!

You won’t want to miss it.
Precise and controlled placement of endodontic repair materials, such as MTA, cements, bioactive dentine substitutes and calcium hydroxide, is critical for a number of procedures, such as pulp capping and surgery.

With the growing global demand to effectively place these materials, Roydent Dental Products now offers the affordable and simplified MAP One Mini Kit, which is better adapted to the needs of GPs and endodontists alike.

The MAP One is a starter kit allowing for optimal usage of material with minimal waste. The MAP One contains one stainless-steel syringe, one NiTi needle, eight plungers and a cleaning curette. Stop by the Roydent Dental Products booth, No. 1321, to learn more today.

DoWell Dental Products is committed to quality, and according to the company, that’s why many doctors and universities have taken notice and chosen it to provide them with the materials and instruments needed for their practices and classes.

DoWell Dental Products is proud to bring forth new products that will make a difference in the dental industry. With the new arrival of the Handpiece Lubricator Cleaner, doctors can take advantage of a cost-effective and portable product, according to the company. Visit the booth for special pricing and promos.
Introducing Ivory® ReLeaf™

Dentistry’s best hands-free suction solution.

ReLeaf ensures that every practitioner can continually provide comfort and efficiency to any dental appointment. With 280 degrees of suction, you never have to worry about suction location again.

- Hands-free, high-volume efficiency
- Soft, comfortable and universal mouthpiece for your patients
- Simple setup—connects to existing HVE system in < 60 seconds

Giving a hand to oral health.
There is a lot of buzz circling around Orascoptic at booth No. 1334 during this year’s CDA Presents in Anaheim, according to the company.

In addition to presenting a portfolio of award-winning loupes and lights, the company will be offering an express shipping service for orders placed during the show. Customers can place their custom loupe order (non-prescription only) at the booth and receive their order the following week. Typical lead time on a custom loupe is three weeks. This is part of the company’s continuing efforts to not only focus on product innovation but also focus on service innovation to benefit customers.

When you’re at the booth, be sure to check out OmniOptic™ — the first and only interchangeable magnification loupe that allows clinicians to select the optimal magnification power for each procedure, according to the company. If you purchase an OmniOptic system with two sets of telescopes at full price, you can receive a third set for free (approximately $2,000 in savings).

Make sure to stay connected with Orascoptic throughout the show by following the company on Facebook, Twitter and LinkedIn. Tune in LIVE on Facebook at 10 a.m. Saturday, where Amber Auger, RDH, MPH, will be discussing the latest innovations in visualization, focusing on the importance of both magnification and illumination when it comes to providing superior patient care.

There will be more exciting promotions taking place throughout the show at booth No. 1334, according to the company, but you’ll have to visit Orascoptic to see for yourself.

To learn more, stop by the Orascoptic booth, No. 1334.
Meet the newest member of your team – iTero Element 2

I'm here to help you do what you do – only better. With faster processing and clearer imaging, I'll transform your digital workflow and your chairside consults, so you can help your patients visualize their new smiles – and say yes to treatment.

New materials designed to quicken procedures, shorten work time and save money

HyperGrip Restoration Pickup Liquid and STELLAR DC Acrylic Pattern Resin now available

By TAUB Products Staff

TAUB Products developed HyperGrip Pickup Liquid as an alternative to expensive single-use tacky micro sticks. By dipping and coating the brush head of any standard micro stick, create more than 400 placement sticks from one bottle.

Once the liquid is dry, be confident in picking up and holding delicate veneers, crowns, internal implant screws, ortho brackets and even four-unit zirconia bridges, according to the company. HyperGrip will not leave a residue. Use the finished HyperGrip coated sticks with Veneer Styx Placement and positioning instruments for the best placement of veneers, crowns, inlays and onlays.

TAUB is also proud to introduce a revolutionary dual-cure acrylic resin – STELLAR DC Acrylic. STELLAR DC Acrylic pattern resin is great for creating verification indexes; transfer and insertion guides for implants; pick-up impression copings; abutment seating jigs; connecting or fixing single implants parts for soldering and welding; and creating structure models of implant components. It can be light cured in 20 seconds or will cure on its own in 60 seconds. It provides the fastest production time of any pattern resin and acrylic, burns out completely, has no polymerization heat during cure and leaves no residue, according to the company.

The material can be layered, reproduces detail accurately and grinds easily, the company asserts. A new technique allows it to repair cracked or damaged dentures in minutes.

“STELLAR DC Acrylic is a great addition to our product line,” said Jordan Taub, executive vice president, TAUB Products. “Using our chemistry and technology, we can now offer the CDT and prostodontist an acrylic that increases production by dramatically reducing production times, which helps the bottom line. STELLAR's on-demand continuous flow of material allows quick and easy fabrication.”

TAUB is known for three products that solve many issues when placing cement-retained implant restorations: GoCHx Gel Syringeable Chlorhexidine, Liquid Magic Resin Barrier abutment access plug and ZERO-G Bio-Implant Cement.

According to Jordan Taub: “Zero-G provides permanent cementation of implant restorations and at the same time retrievability of those restorations. This is the best of both worlds for the doctors who want access to the abutment and also for the doctors who never want the restoration to come off. When we designed this cement, we understood incomplete cleanup of other cements, and peri-implantitis was a cause of concern. Giving Zero-G the highest radiopacity over any other implant cement makes any excess cement extremely visible. The cleanup is unlike anything else on the market; any excess can be completely removed.”

GoCHx can be applied precisely, staying where it is placed, and rinses completely. Use GoCHx Gel for everyday use.

From no-prep restorations to full mouth reconstruction, using emax®, CEREX®, zirconia, lithium disilicate, feldspathic porcelain and PFMs, FUSION Zr® Esthetic Resin Cements provides the best results, according to the company. These esthetic cements allow dentists to present their best work by offering ease of use, fast cleanup, high-bond strength and correct color representation.

Stop by booth No. 1280 for a demonstration, grab literature and find out about TAUB Products’ show specials. The company is also looking to build its lecture-based clinicians. If you feel any of these products have value in your practice and/or dental education programs, stop by the booth, call (800) 828-2634 or e-mail sales@taubdental.com.

Introducing PLANMECA PlanMill® 30 S

Demo the PlanMill 30 S at CDA Booth 1376

Achieve Maximum Productivity with Minimal Effort. The New Planmeca PlanMill 30 S designed for optimal precision without compromising quality, expectations or budget.

- SMART Software: Streamlines the user experience with updates to notify you when the mill needs attention.
- 4-Axis High-Speed Spindle: Ideal for single visit restorations and everyday milling of inlays, onlays, crowns or bridges.
- Automated Tool Changer: Detects worn or broken burs automatically replacing them creating a more efficient milling process.
- Direct Drive Linear Force Servo Motors: Uncompromising accuracy and capable of milling a broad range of materials.

www.planmecausa.com
Is your office in compliance with the new CDC sterilization guidelines? Recently the CDC issued additional guidelines for infection control, which contains the most up-to-date infection prevention recommendations and expectations for safe care in the dental setting. Dental handpieces are specifically mentioned in the following quoted statement:

“Dental handpieces and associated attachments, including low-speed motors and reusable prophylaxis angles, should always be heat sterilized between patients and not high level or surface disinfected. Although these devices are considered semicritical, studies have shown that their internal surfaces can become contaminated with patient materials during use. If these devices are not properly cleaned and heat sterilized, the next patient may be exposed to potentially infectious materials.”

In my humble opinion, it implies that any item that can be removed from the air line should be heat sterilized. This includes hygiene handpieces, low-speed motors and any quick disconnects that are being used in your dental practice.

Several state dental boards are making this a mandatory procedure—which it should be, to not only protect our patients but also ourselves and our staff.

Fortunately, Medidenta is trying to do its best to help us out with this particular situation, and Medidenta’s CDC bundle does just that. When you buy the Meditorque Elite three-piece kit, which consists of an Elite 25k low-speed motor, an Elite latch contra-angle and an Elite nose cone attachment, you then get for free—yes, free—your choice of one Prophy Pro Hygiene handpiece or one Atom high-speed handpiece. It is Medidenta’s way of helping us out so that our dental practices will comply with these new guidelines.

You probably have seen Medidenta’s CDC bundle advertisements. Because the CDC guidelines specifically call out slow-speed motors, this three-piece kit allows you to have a slow-speed motor with attachments and also receive a hygiene handpiece for free.

Or, of course, you can get the free Atom high-speed handpiece, which I personally think is the bomb!

Glidewell Dental to present its second educational symposium near Washington, D.C.

By Glidewell Dental Staff

Glidewell Dental, a leading technological innovator in restorative dentistry for more than 48 years, has announced the second Glidewell Dental Symposium. Scheduled for Oct. 19 and 20, at the Gaylord National Resort & Convention Center in National Harbor, Md., near Washington, D.C., this event will include more than a dozen prominent educators providing two days of intensive instruction, with a first day of fast-paced presentations and a second day of in-depth clinical and business training.

“Dentists have more options for treating patients today than ever before,” said Dr. Neil Park, scientific chair of the Glidewell Symposium and vice president of clinical affairs at Glidewell Dental. “This period of rapid innovation in dental technology presents many opportunities for clinicians to expand their knowledge and practice offerings and to explore more effective and efficient solutions for elevating the standard of care within our profession.”

The symposium brings together notable experts from many different backgrounds and specialties, including esthetic dentistry, digital dentistry, dental implants, tissue regeneration, sleep-related dentistry, practice management and more. The event kicks off Friday, Oct. 19, with a presentation on the current and future state of dentistry from Jim Glidewell, CDT, president and CEO of Glidewell Dental, followed by an energizing lineup of informative presentations and a very special keynote address delivered by Dr. Jack Hahn, a legendary pioneer in dental implantology.

On Saturday, Oct. 20, in-depth, hands-on workshops will be led by some of the most distinguished leaders in clinical dentistry, representing faculties such as the Misch International Implant Institute, the International Congress of Oral Implantologists and the American Academy of Implant Dentistry. The workshops will provide practical clinical information on the latest innovations, protocols, products and procedures in the field, so that clinicians can immediately implement focused techniques into their practice when they return to the office on Monday.

“Following the success of last year’s sold-out symposium, we received an abundance of feedback from attendees who expressed their desire for refining their clinical skills and adopting the latest technology to grow their practice,” said Park. “They inspired us to expand the event to two days, to cover even more clinical and business topics, with nearly a dozen hands-on Saturday workshops to choose from. And we’ve moved to a more spacious venue to accommodate a vast array of interactive exhibits and technology demonstrations.”

During both days of the event, the exhibition floor will be packed with displays of 3-D printing, intraoral scanning, in-office milling, the CAD/CAM workflow, dental implants and regenerative and restorative materials, as well as live demonstrations and a virtual reality tour of Glidewell Dental’s expansive R&D campus, technology center and laboratory.

The 2018 Glidewell Dental Symposium is designed for dentists, hygienists and chairside and front-office auxiliaries, and attendees enrolled for both days will earn up to 12 hours of C.E. credits. Tuition for day 1 is $195 and day 2 is $150, with special early bird pricing of $125 and $95, respectively, when registering by July 31.

On Friday, tuition includes a complimentary breakfast, lunch and cocktail reception with hosted bar; Saturday tuition includes breakfast.

For the complete symposium agenda and to register, visit glidewell symposium.com or call (866) 791-9539.
Lasers have revolutionized the way dental professionals provide care.

New scanners expand iTero Element portfolio

By Align Technology Staff

Align Technology has expanded the iTero Element portfolio with the launch of the iTero Element 2 and the iTero Element Flex scanners. These additions build on the existing high-precision, full-color imaging and fast scan times of the iTero Element portfolio.

The next-generation iTero Element 2 is designed for greater performance with two times faster start-up and 25 percent faster scan processing time compared to the iTero Element, according to the company.

“We’re excited to expand the iTero portfolio with two new advanced digital scanners that expand customers’ choices and provide them with the imaging precision, intuitive chairside visualization and patient communication tools,” said Raphael Pascaud, Align Technology chief marketing, portfolio and business development officer and senior vice president, iTero scanner and services. “With iTero Element 2 and iTero Element Flex, we are building on a trusted platform with enhanced features and processing performance, new mobility options and greater portability designed to fit the needs of our customers’ practices and simplify their lives. Doctors can now choose the iTero Element scanner that is best for them with confidence knowing that each solution is going to deliver the precision, power, speed, and full-color imaging they’ve come to expect for their iTero-powered workflows.”

**iTero Element 2**

The new iTero Element 2 scanning system is equipped with next-generation computing power that enables faster start-up and faster scan processing time, according to the company. The iTero Element 2 provides improved screen resolution while minimizing scanner footprint due to its slim 21.5-inch monitor and 16:9 widescreen viewing format.

An integrated lithium-ion battery provides easy mobility from operatory to operatory without the need to plug in for power or reboot. The iTero Element 2 scanner is designed with an ergonomic, centered wand cradle for easy access.

**iTero Element Flex**

The new iTero Element Flex wand-only configuration is a portable scanner for easy transport from office to office, allowing doctors to leverage the power of chairside visualization coupled with iTero scanning precision in any location. Working seamlessly with compatible laptops, practitioners can now scan anywhere, even in the smallest of operatories. The iTero Element Flex includes a custom-designed carrying case.

**References**

1. With a fully charged battery, the user can scan for 30 minutes without having to plug in for power.
2. iTero Element Flex is a mobile optical impression system (CAD/CAM) used to record the topographical images of teeth and oral tissue. To use the iTero Element Flex scanner, the user must purchase a laptop separately. To view a list of certified laptops, please visit the iTero.com website.
3. Laptop and all its accessories shall be located at least 1.5 m away from the patient. Do not scan a patient and touch the laptop or any of its accessories at the same time.

All canals are not created equal. Neither are hand files.

Roydent offers a full array of files so you have the right file for the job. Every time.

C-Files  
For initial access and breaking through calcification

K-Files  
For full instrumentation

Flexicut Files  
Triangular blade for increased flexibility. For full instrumentation

NITI Files  
Conforms to the curvature of the canal during instrumentation

All Roydent hand files are German made with precision engineering.
Also available: Hedstroms, Reamers, Mid-Sized K-Files.

By Anutra Medical Staff

Medical device company Anutra Medical is now adding 1 percent lidocaine with epinephrine 1:100,000 to its product offerings, making this particular concentration of lidocaine more accessible to the dental market than ever before.

A published study that appeared in the Journal of Oral and Maxillofacial Surgery in October 2017 showed that buffered 1 percent lidocaine with epinephrine can be equally as effective as 2 percent lidocaine with epinephrine for a maxillary field block. This independent study by the University of North Carolina, Chapel Hill, found that buffering 1 percent lidocaine with epinephrine 1:100,000 with the Anutra Local Anesthetic Delivery System® “reduces the pain on injection with a maxillary field block and results in similar lengths of pulpal anesthesia tested with a cold stimulus” as compared to the traditionally used 2 percent lidocaine with epinephrine 1:100,000.

As a result of the study showing the benefits of the lower concentration of lidocaine, Anutra Medical is now adding 1 percent lidocaine with epinephrine, 1:100,000 as one of its regular product offerings.

In other studies conducted in April 2017, utilizing the Anutra Local Anesthetic Delivery System, The School of Dentistry at the University of North Carolina, Chapel Hill, found that, “Mean blood level differences of lidocaine for each patient were significantly lower after nerve block with the buffered drug compared with the nonbuffered agent.”

Anutra Medical is excited to introduce 1 percent lidocaine 1:100,000 into the dental market in a more accessible format than it has been in the past. The option of this new concentration of lidocaine to dental practitioners further shows Anutra’s dedication to increasing patient experiences while transforming practitioner’s efficiency, according to the company.

Anutra is currently accepting orders for the new product offering.

REVEAL HD Bulk: When you need speed but don’t want to sacrifice strength or esthetics

By Dr. Joseph Kim

When it comes to composite restorations, dentists are often asked to sacrifice speed for quality or quality for speed. This has been especially true when it comes to bulk fill composites, which brought the promise of larger increment sizes but required specialized equipment or were otherwise difficult to handle.

Now, clinicians can have a composite that easily adapts to the tooth and can be used in a true bulk fill technique. REVEAL® HD Bulk is BISCO’s new bulk fill light-activated restorative composite, optimized for simpler and faster posterior restorations. REVEAL HD Bulk combines appropriate handling, depth of cure and polishability, allowing clinicians to provide patients with functional and esthetic composites while saving valuable chair time.

REVEAL HD Bulk allows for layering increments up to 5 mm because of its predictable depth of cure. This feature is accompanied by low volumetric shrinkage, high flexural strength and excellent radiopacity, resulting in long-lasting, durable restorations. While REVEAL HD Bulk is indicated for all direct and indirect restorations, clinicians will appreciate the significant time savings that bulk filling provides, especially in posterior teeth.

Like other restorative composites, it is important to maintain adequate isolation to prevent contamination of the tooth from saliva and blood. When indicated, use of a sectional matrix system with significant separating force will ensure excellent adaptation to the proximal margins, as well as minimize interproximal food impaction.

After excellent isolation has been achieved, a universal bonding agent, such as ALL BOND UNIVERSAL®, is applied to all prepared surfaces according to manufacturer instructions. When possible, it is ideal to selectively etch the enamel surfaces where the composite is intended prior to application of the bonding agent, resulting in minimal long-term marginal leakage and dentinal sensitivity issues.

Depending on operator preference, a flowable composite resin may be used in the deepest and least accessible areas of the preparation, including undercuts and the cavosurface margins of proximal boxes. The appropriate shade of REVEAL HD Bulk can be placed in a single increment for most Class 1, 2 and 3 restorations. For preparations that include areas that are deeper than 5 mm, it is advisable to build the restoration in appropriately sized increments.

Keep in mind that because of its unique chemistry, care should be taken to avoid unnecessary exposure to light, including from ambient and overhead sources, in order to avoid premature hardening of the material. Finally, the restoration can be finished with fine diamonds and finishing carbides, followed by finishing points. It is worth noting that since REVEAL HD Bulk’s viscosity has been tuned for bulk fill applications, it is preferable to limit occlusal carving and shaping to primary anatomy prior to curing. After curing, greater detail may be added with finishing burs, as needed.

Alternatively, when darker or opalescent restorative composite shades are required, REVEAL HD Bulk can be placed and cured short of the occlusal cavosurface margins. The final layer can be a traditional restorative composite in an ideal shade and opacity. Because REVEAL HD Bulk is universally compatible, it will serve as an excellent base under all light-activated restorative composites.

REVEAL HD Bulk has been specifically designed to address the needs of clinicians who require the speed of a bulk fill restorative composite without sacrificing strength and ignoring esthetics. It is currently available in the most commonly used shades, from A3 to B1, in both syringe and unit dose form.

YOU ARE INVITED TO ATTEND
A seminar on efficient, effective design presented by Dr. Jeff and Pat Carter.
October 12, 2018 | The Cosmopolitan of Las Vegas, Las Vegas, NV

OVERVIEW
About the Seminar
Making your dental practice as successful as it can be is a big job—one that extends well beyond the elements of practice management that you learned in dental school.

The ImpactDesign seminar, led by Dr. Jeff and Pat Carter, IIDA of Practice Design Group (PDG) and sponsored by Midmark Corporation, can help you achieve your ideal dental practice through a personalized, interactive discussion about efficient, effective dental-specific design principles.

In addition to a consultative approach to solving your dental design-related practice challenges, you’ll receive SIX CONTINUING EDUCATION CREDITS* from the Practice Design Group upon completion.

KaVo Kerr, an organization composed of two global leaders in dentistry, is pleased to unveil the expansion of its growing portfolio of imaging solutions with the new DEXIS FS Ergo by KaVo. Built upon the award-winning DEXIS PerfectSize™ sensor and TrueComfort™ design, the FS Ergo stands as the latest innovation to redefine patient comfort and create a new class of digital sensors, according to the company.

FS Ergo combines innovative design and skillfully engineered components to add ease and flexibility to the patient experience, the company asserts. The sensor provides significant improvements in comfort for patients with low tolerance for standard intraoral modalities, allowing for a more pleasant sensor placement that patients will remember.

Other FS Ergo features include:

- **Sensor housing:** Resistant to bite marks, the submersible sensor housing can also withstand a wide variety of disinfection chemicals.
- **Cable-to-sensor connection:** Equipped with connectivity proven successful under rigorous testing to such forces as pulling, twisting, straining and bending.
- **USB connector:** Built to withstand high frequency insertion and pulling cycles, the USB connection adds to the overall durability of the sensor.
- **Contoured positioning system:** Made from advanced materials, the positioning system allows the sensor to easily exit and protects the longevity of the cable from wear and tear.

DEXIS FS Ergo by KaVo helps to reduce retakes because of patient movement caused by discomfort, thereby enhancing practice efficiency and creating a streamlined digital workflow, according to the company.

By pairing the newly developed flexible sensor technology with a soft housing, FS Ergo can “give” as X-rays are being captured. Even the proprietary holder system is uniquely designed to accommodate the flex of the sensor so that it can adapt to your patient and thus offer the best radiographic experience possible, according to the company.

“DEXIS products have always instilled confidence in patients and practitioners, and FS Ergo by KaVo will reinforce their beliefs,” said Insiyah Ahmedi, senior marketing manager, KaVo Kerr Intraoral Imaging. “The complete line of DEXIS imaging products has continually displayed the ability to innovate and excite with digital solutions that consistently provide highly diagnostic information crucial for patient care.”

Dental professionals are encouraged to experience how the FS Ergo can work for them by visiting KaVo at the CDA Presents The Art and Science of Dentistry in booth No. 1334.
STEELAR Efficiency and Increased Production equals MORE billable hours

USES:
- Create implant verification jigs, transfer and insertion guides.
- Easy creation of Pick up Impression Copings, and copings for PFM restorations.
- Position misaligning implant components during seating.
- Indexes to connect or fix single implant parts for soldering and welding.
- Unlimited uses.
- Use as a Pattern Resin.
- Repair acrylic in minutes.
- CDT and Prosthodontist approved.

FEATURES:
- Dual Cure: Light cure 20 sec; Self-cure 60 sec.
- Fastest production times.
- Burns out clean “no residue”.
- No polymerization heat.
- Material easily layered.
- Excellent and accurate reproduction of detail. Grinds easily.

ITEM #: 50-1010 - Red - 1x 5.85g Syringe

A Q&A with Dr. Lee Ann Brady on the new Ivory ReLeaf device from Kulzer

**By Kulzer Staff**

- Dr. Lee Ann Brady is a nationally recognized dentist and dental educator who says her goal is to partner with patients to assist them in making the best dental-health choices.

  Brady shares her experience with the new Ivory® ReLeaf™ from Kulzer.

*What are some of the challenges you face as a clinician during common dental procedures?*
Keeping the field isolated from saliva, managing the water spray from equipment and retracting the tongue and cheek.

*Which procedures do you find suction devices to be most useful?*
All procedures, as long as the suction can be hands-free.

*You were one of the first clinicians to try the Ivory ReLeaf. In what situations do you find it to be most effective?*
It can be used with or without a bite block, so it is great for patients who cannot tolerate a bite block or have small mouths.

*What do you see in terms of the impact on patients when using the product?*
They are more comfortable as they do not feel the water pooling in their mouth and like they have to resist swallowing. It also protects the inside of their cheek.

*What do you see as the value of Ivory ReLeaf to a practice?*
Shorter appointments, greater daily production, enhanced patient comfort and setting your practice apart.

---

CDC RECOMMENDATIONS HIT CALIFORNIA

STATE DENTAL BOARDS ARE SHIFTING TOWARD STERILIZATION.

CDC Guidelines recommend that, "dental handpieces and the attachments should always be heat sterilized between patients". Additionally, they state, "If a semicritical item does not come in contact with mucous membranes or non-intact skin, it does not require heat sterilization". Most practices utilize a plastic barrier on the handpiece to prevent cross contamination. Currently, 40 state dental boards subscribe to the CDC Guidelines.

IT’S NOT A RECOMMENDATION, IT’S THE LAW.

In 15 states, state dental practice acts mandate the heat sterilization of handpieces and more states are following suit. With infection control and the sterilization of instruments becoming more transparent to patients, more states may be on the verge of adopting similar mandates.

Headlights: Now in high-definition

By Designs for Vision Staff

Designs for Vision is introducing an advanced photonic design that provides uniform light distribution with maximum intensity.

The patent-pending headlights optically focus the light from the LED to provide 45 percent more light with uniform distribution.

The new LED DayLite® Micro HDi™ combines the new high-definition imaging with a very lightweight headlight in combination with the new Micro power pack, according to the company, which says the Micro power pack is the lightest and smallest available. The complete unit includes two power packs, and each power pack can run up to 10 hours.

Designs for Vision has also added the high-definition imaging to LED DayLite WireLess Mini HDi, providing a lightweight, cordless solution with high intensity comparable to many cored headlights. You can choose high-definition imaging with either a wired or wireless design to meet your preference, and all HDi headlights will illuminate the entire oral cavity.

Designs for Vision’s WireLess headlights free you from being tethered to a battery pack. The simple modular designs uncouple the headlights from a specific frame or single pair of loupes.

Prior technology married a cordless light to one pair of loupes via cumbersome integration of the batteries and electronics into the frame.

The compact design of the LED DayLite WireLess headlights are independent of any frame/loupes.

In addition, Designs for Vision is also featuring the REALITY 5-star rated The Micro 3.5EF Scopes, which utilize a revolutionary optical design that reduces the size of the prismatic telescope by 50 percent and reduces the weight by 40 percent while providing an expanded-field, full oral cavity view at 3.5x magnification.

Building on the award-winning design, the newest addition to the Micro Series line is the Micro 4.5EF Scopes. These scopes reduce both the size and weight of the telescopes by 44 percent.

On the move

Designs for Vision has expanded into a new 67,500-square-foot location at 4000 Veterans Memorial Highway in Bohemia, N.Y.

You can visit www.designsforvision.com/move.htm to check out some photos of the new facility.

Here in Anaheim

You can see the Visible Difference® yourself by visiting Designs for Vision’s booths, Nos. 846 and 1202, or contact the company to arrange a visit in your office by calling (800) 345-4009 or emailing info@dvimail.com.

# COLTENE CDA Show Specials 2018

**Booth #2250**

**BRILLIANT EverGlow**
- Universal Substructure Hybrid Composite
- Outstanding patient acceptability and gloss retention
- Brilliant single-shade restorations simplify color management
- Highly flexible system for all indications

**Canal Pro**
- Apex Locator
  - Brilliant, colored 3D panel
  - Accuracy of measurement
  - Audio feedback with volume control
  - Rechargeable battery

**Alpen Rotary Burs**
The Alpen brand and its rotary instruments have been synonymous for Swiss quality, precision and reliability and American Ingenuity for over 30 years.

**Endo Ice**
- Refrigerant Spray
  - Cold stimulus for diagnosing pulpal health
  - Much colder than ice or ethyl chloride
  - Trigger spray with spray extension
  - No chloroform or carbon
  - Fresh spearmint spray

**GuttaFlow**
- No heat – no shrinkage
- Sealer and gutta-percha in one material
- Exceptional flow plus expansion - no condensation required
- Adheres to gutta-percha and dentin

**Greater Taper Paper Points**
- Precise in size and taper
- Available in conventional and standardized sizes
- No adhesives
- Form yet flexible for easy application
- Fully automated production

**Synergy D6**
- A spectrum of color with only 6 shades
- Non-sticky, non-staining
- Easy shade matching, what you see is what you get

**S.P.E.C. 3 LED Curing Light**
- Multiple modes for your dental curing needs
- High intensity output for rapid polymerization
- Intuitive and simple control for ease of use

**Coltolux LED Curing Light**
- Slim design
- Fast cure time - 2 mm in only 10 seconds
- Cordless
- Hundreds of cures per full charge

**HyFlex CM controlled memory files**
- 300% more resistance to separation
- No rebound - Extreme Flexibility
- Superior canal tracking
- Regains shape after sterilization - Multi-use

**HyFlex EDM**
- Unmatched flexibility and fracture resistance in one file system
- Up to 700% higher fracture resistance
- Specially hardened surface
- Less filing required for treatment success

**BioSonic UC300**
- Ultrasonic Cleaners
  - 3 gallon tank capacity
  - Stainless steel tank
  - Unique hinge reduces noise levels for quiet operation
  - Packed model available

**BioSonic UC125**
- Ultrasonic Cleaner
  - 125 gallon tank capacity
  - LCD technology for customized operation
  - Quiet operation
  - Stainless steel tank

*Full quantity may be purchased on a maximum of two orders. May not be combined with any other COLTENE promotion.*
Digital X-rays are changing how you manage patient diagnostics. But while digital is faster and easier to use, it poses some unique challenges too. Sensor positioning is one such challenge. Unlike film, sensors are rigid and thick. And unlike film, there is no standard size to a “size-2” sensor. All this makes finding a quick and easy way to position your sensor somewhat more difficult than when you were using film.

With Flow Dental’s new Uni-Verse-All positioner, you could take every imaginable X-ray while using only one positioner and one aiming ring. Sounds impossible, yet Flow’s Uni-Verse-All sensor positioner does just that. It will hold just about any size sensor. The Uni-Verse-All sensor holder lets you reposition the sensor along the bite plane so you can go from a periapical to a bite wing in seconds, and without changing parts.

The Uni-Verse-All is easy to use and set up is fast. You choose from two sizes of sensor holders (both included in Flow’s starter kit). You then snap the sensor holder into the Uni-Verse-All positioner and slide on the aiming ring. Just like that you’re ready.

Move the holder down for anteriors or periapicals, up for bite wings. Lightweight for added patient comfort, Uni-Verse-Alls are re-useable and autoclavable.

A starter kit with everything you need retails for less than $57.

For more information, or to order, you can contact your local dealer or visit www.FlowDental.com.
