COLTENE introduces the new BioSonic UC150 Ultrasonic Cleaner

By COLTENE Staff

COLTENE presents the BioSonic® UC150, the latest product in its award-winning line of ultrasonic cleaning systems. With its sleek, Swiss design, the new BioSonic UC150 is built for versatility, efficiency and convenience, according to the company.

The UC150 offers a stainless-steel tank with a 1.5-gallon use capacity designed with a small footprint while providing generous capacity. The unit can accommodate multiple cleaning configurations, including beakers, baskets and up to four medium-size instrument cassettes.

The UC150 can be used as a countertop unit or recessed unit, enabling flexibility in any sterilization-center setting.

A multilingual touchscreen allows full functionality with a gloved hand.

The UC150 touchscreen features customizable temperature settings, run time, solution tracking and data logging. Included with the touchscreen is a USB interface that allows for downloading of cleaning data.

An optional built-in controlled heating feature (70-140 degrees F) can improve efficiency of the ultrasonic cleaning process by quickly heating the unit to its desired cleaning temperature. Additionally, a built-in high temperature safety feature protects the unit from over-heating.

The BioSonic UC150 comes packaged with a cassette basket included, as well as a recess template and gasket. Additional BioSonic accessories and ultrasonic cleaning solutions can be purchased separately.

Primescan earns Red Dot Award Product Design 2019

Digital impressions and outstanding design

By Dentsply Sirona Staff

Dentsply Sirona introduced Primescan in February — an innovation in digital impressions. The new intraoral scanner has now been awarded the highly renowned Red Dot Award Product Design 2019. This award acknowledges Dentsply Sirona’s goal of developing attractive and highly functional solutions for its customers that provide valuable results in everyday use.

Strong design and sustainable products — this was an emerging trend at this year’s Red Dot Awards Product Design. ‘Fun to use’

“We are very pleased to receive this award, which we consider to be an acknowledgement of our efforts to provide our customers with products that are of high quality in all respects,” said Dr. Alexander Völcker, group vice president CAD/CAM and orthodontics at Dentsply Sirona. “Thanks to its design, Primescan is easy to handle in the normal practice environment, it reliably delivers clinically sound results, and it is just fun to use.”

Primescan features improved impression technology that scans with an impressive level of accuracy, according to the company. This makes Primescan a remarkable response to an important requirement in modern practices. After scanning, the data from the digital impressions are available for many applications, both in restorative dentistry and in implantology and orthodontics.

The globally acknowledged Red Dot Award has been awarded to outstanding products, design concepts and communication designs for more than 60 years. This year, the 39-member jury of independent designers, design professors and journalists rated a total of 5,500 products from 55 countries in 48 categories.

The most important criterion for awarding the coveted prize is high design quality.

About Dentsply Sirona

Dentsply Sirona is one of the world’s largest manufacturer of professional dental products and technologies, with over a century of innovation and service to the dental industry and patients worldwide. Dentsply Sirona develops, manufactures, and markets a comprehensive solutions offering including dental and oral health products as well as other consumable medical devices under a strong portfolio of world class brands. As “The Dental Solutions Company™,” Dentsply Sirona’s products provide innovative, high-quality and effective solutions to advance patient care and deliver better, safer and faster dental care, according to the company.
