Here at the Yankee Dental Congress, there is plenty to learn, from implant placement to esthetic and restorative procedures and everything in between.

Courses are being taught by some of the top names in dentistry.

Dr. Ron Kaminer has presented three courses so far — “Restorative Dentistry: Deciphering the New Material Dilemma” on Thursday, and “Tips and Tricks for Maximum Production” and “Biodynamic Dentistry” on Friday. Today at 2 p.m., Kaminer presents “Eight High-Tech Procedures for your Day-to-Day Practice.”

Dr. Charles Schlesinger presented “The Advantage of Osseous Fixation,” a lecture and live surgery. Attendees learned about osseous fixation and how implants can change the way they practice dentistry.

Stephanie Meyers, RD, presented “Fighting Cancer With Your Fork: Separating Fact From Fiction” on Friday morning in a classroom on the exhibit hall floor.

Courses are still being offered today, so check the show guide for times and locations.

“Lots of snow in the Northeast did not stop the Yankee Dental Congress from going on as scheduled. (Photos/Fred Michmershuizen, today Staff)
diameter, silicone-surfaced handles that are designed to improve comfort. At Planmeca (booth No. 1631), you can check out the ProMax S3, which has an anatomically accurate extraoral bitewing program, made possible with patented SCARA (selectively compliant articulated robotic arm) technology. According to the company, these extraoral bitewings eliminate gagging and capture a greater number of surfaces for better caries detection vs. intraoral modalities and are especially useful for periodontal patients, children, elderly patients, claustrophobic patients, patients with special needs, patients that gag or patients in pain.

Isolite Systems (booth No. 709) is showcasing its dental isolation systems, which are designed to deliver an isolated, humidity- and moisture-free working field as dry as the rubber dam but with significant advantages – including better visibility, greater access, improved patient safety and a leap forward in comfort.

Plus, the company says, Isolite allows dentists to work in two quadrants at a time. TAUB Products (booth No. 2113) is offering its new ZERO-G Bio Implant Cement, a dual-cure implant cement recommended for intermediate to long-term cementation of implant-retained restorations.

ZERO-G Bio Implant Cement works with all substrates and can also be used for traditional crown-and-bridge restorations, according to the company.

The exhibit hall is open until 4 p.m. today.
